

Cuyama Basin Groundwater Sustainability Agency

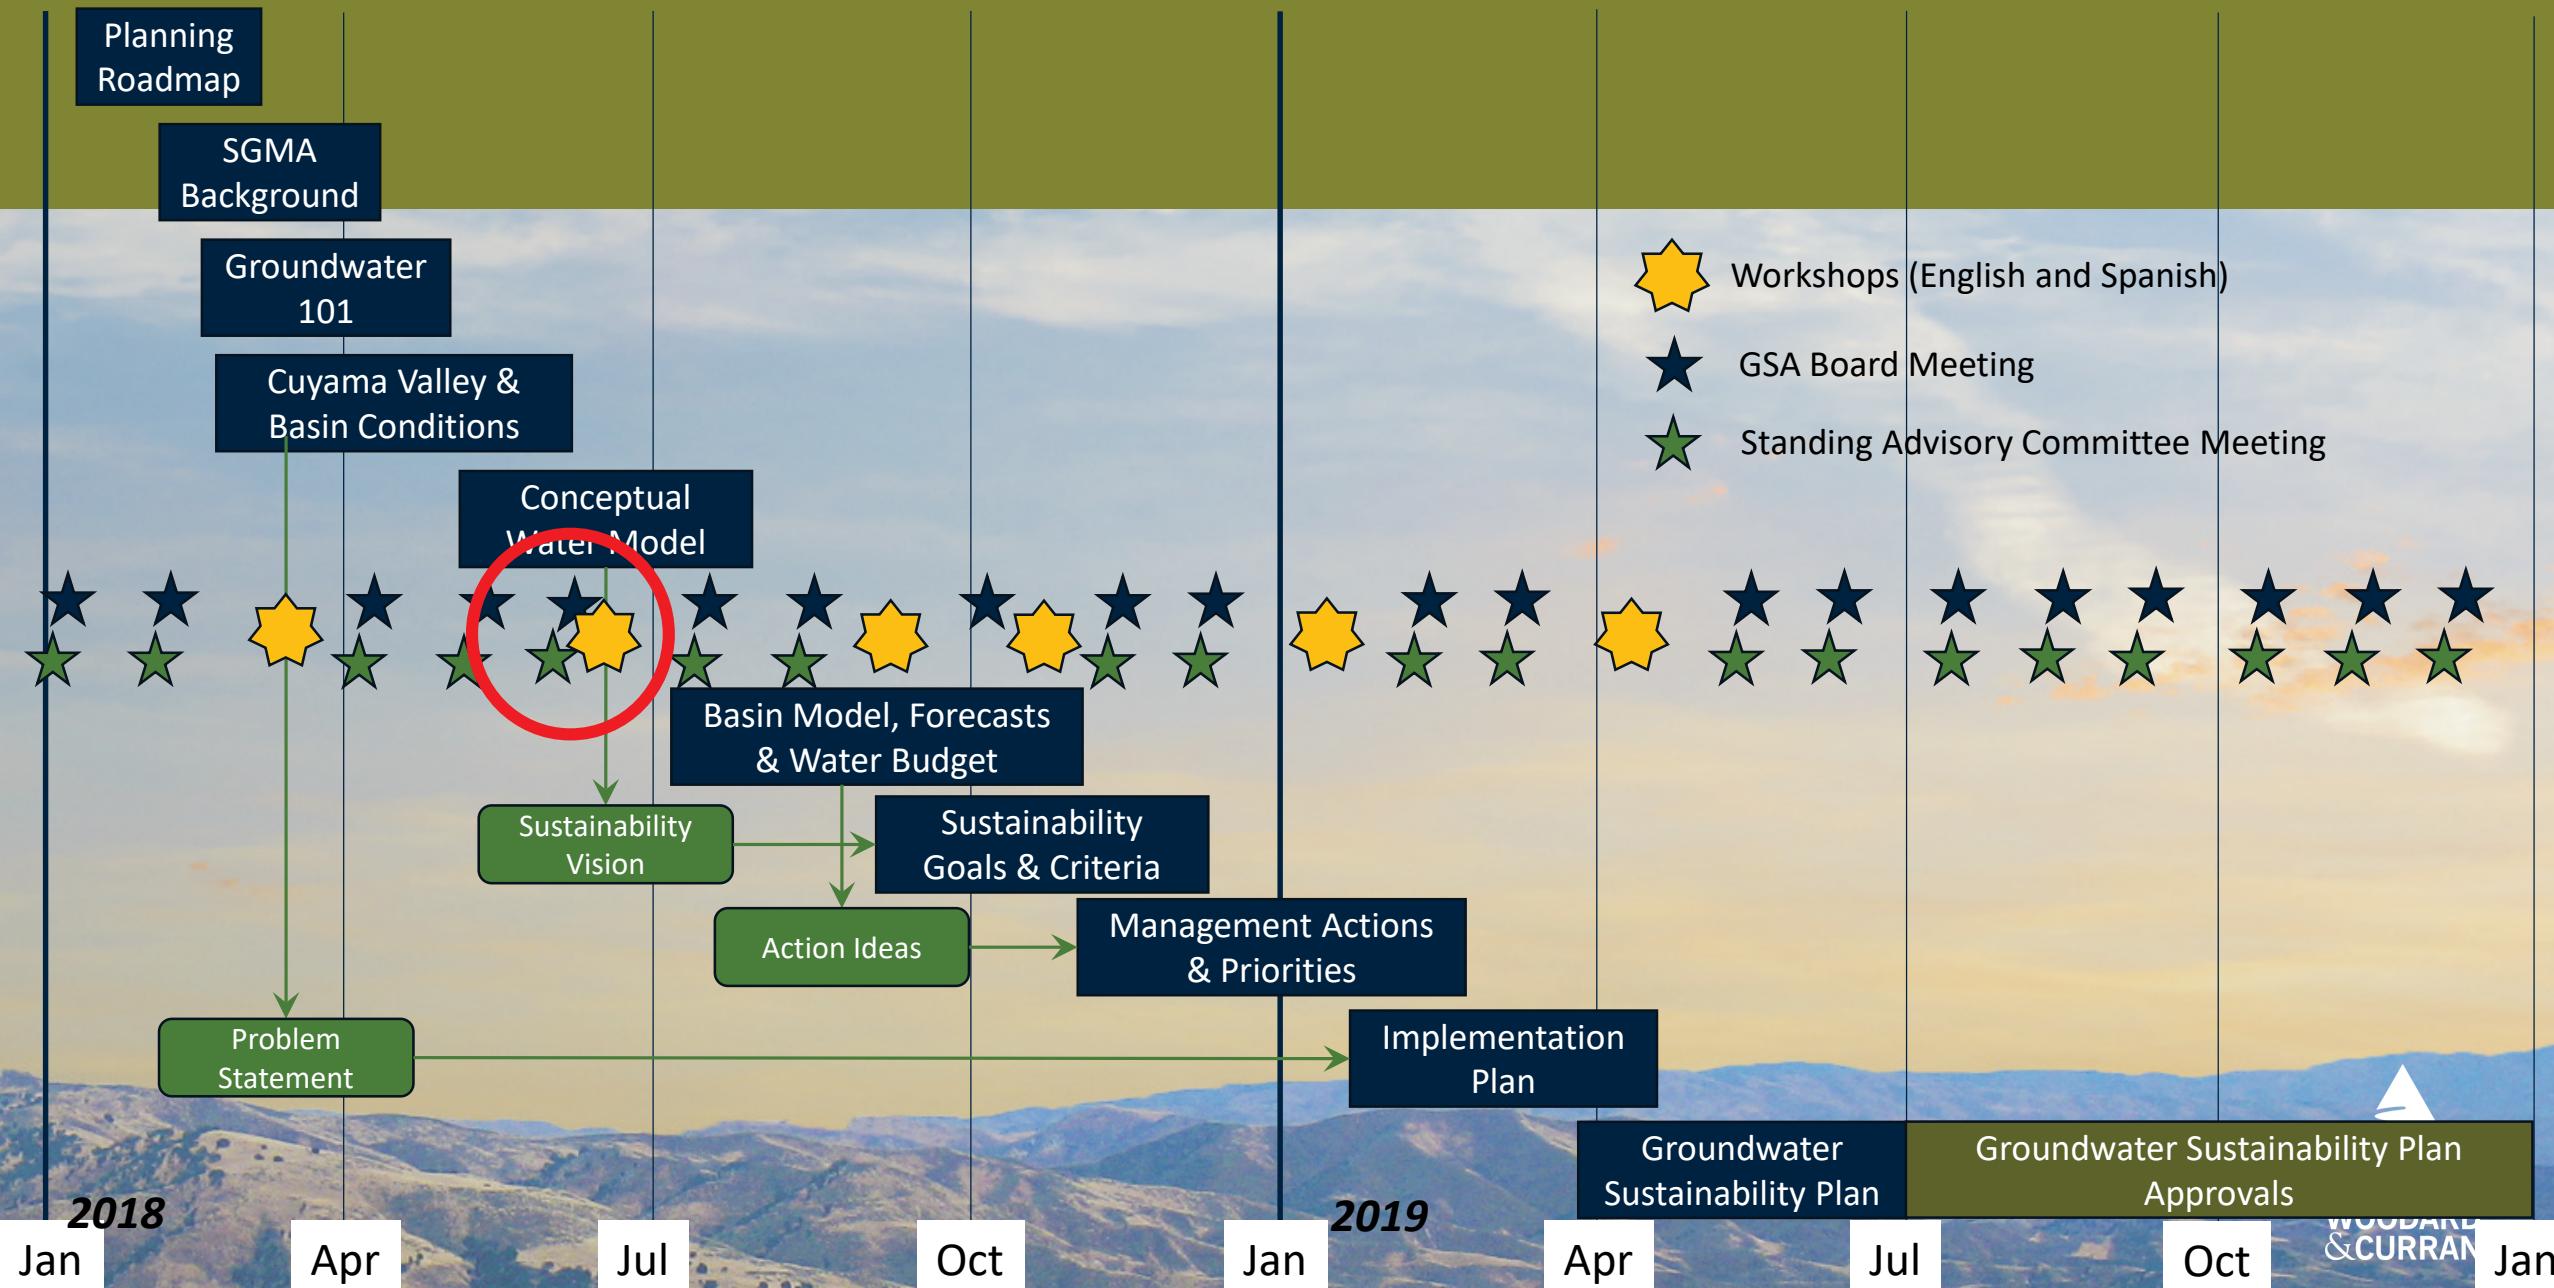

Sustainability Agency Meeting and Public Workshops

June 6, 2018

Agenda

- Welcome and Introduction (5 min)
- Cuyama Basin - Physical Conditions Overview (20 min)
- Questions/Discussion (30 min)
- Interactive Discussion on Groundwater Sustainability in the Cuyama Basin (40 min)
- Summary and Next Steps (15 min)

Cuyama Basin Groundwater Sustainability Plan – Planning Roadmap

Cuyama Basin Groundwater Sustainability Plan – Discussion Topics

Data & Information

Data Collection	Management Plan	Management System	Monitoring Networks	Monitoring Plan
	Plan Area Description			

Data Review &
Validation

Water Quality
& SGMA

Basin Model

Conceptual Water Model	Analytic Basin Model	Water Budget & Forecasts
Models & Data	Initial Management Areas	Management Areas

Sustainability Goals

What is Sustainability?	Sustainability Vision	Undesirable Results	Sustainability Goals & Criteria
-------------------------	-----------------------	---------------------	---------------------------------

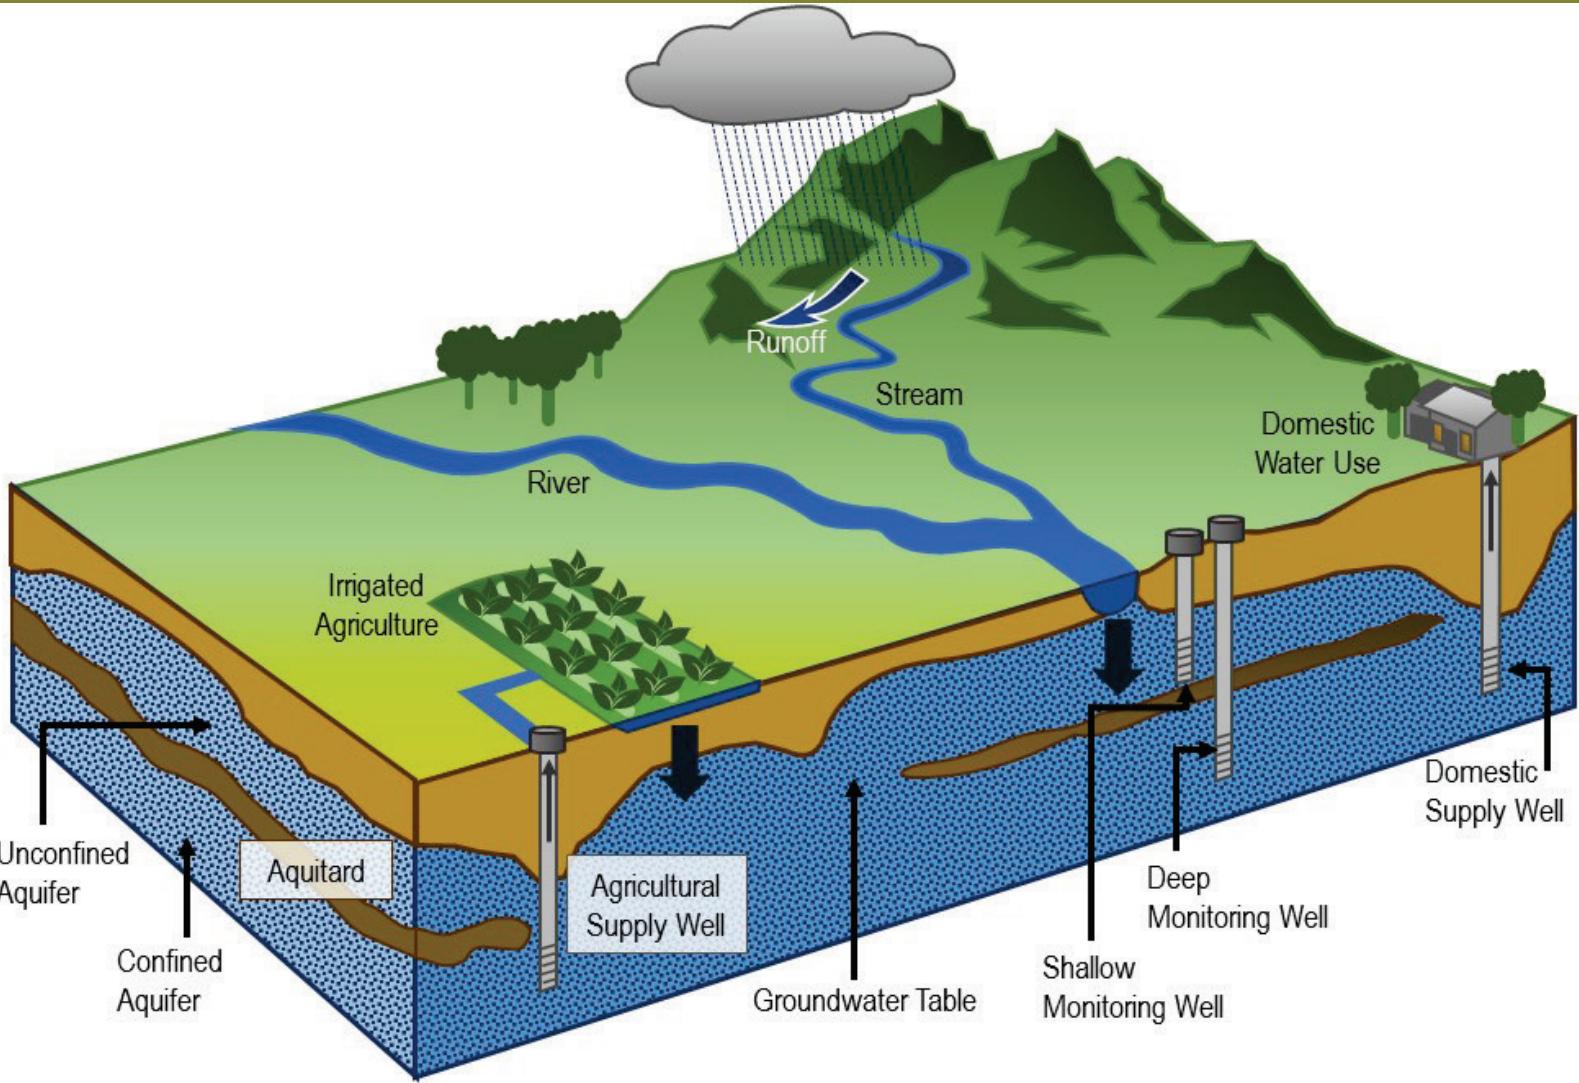

Education Topics

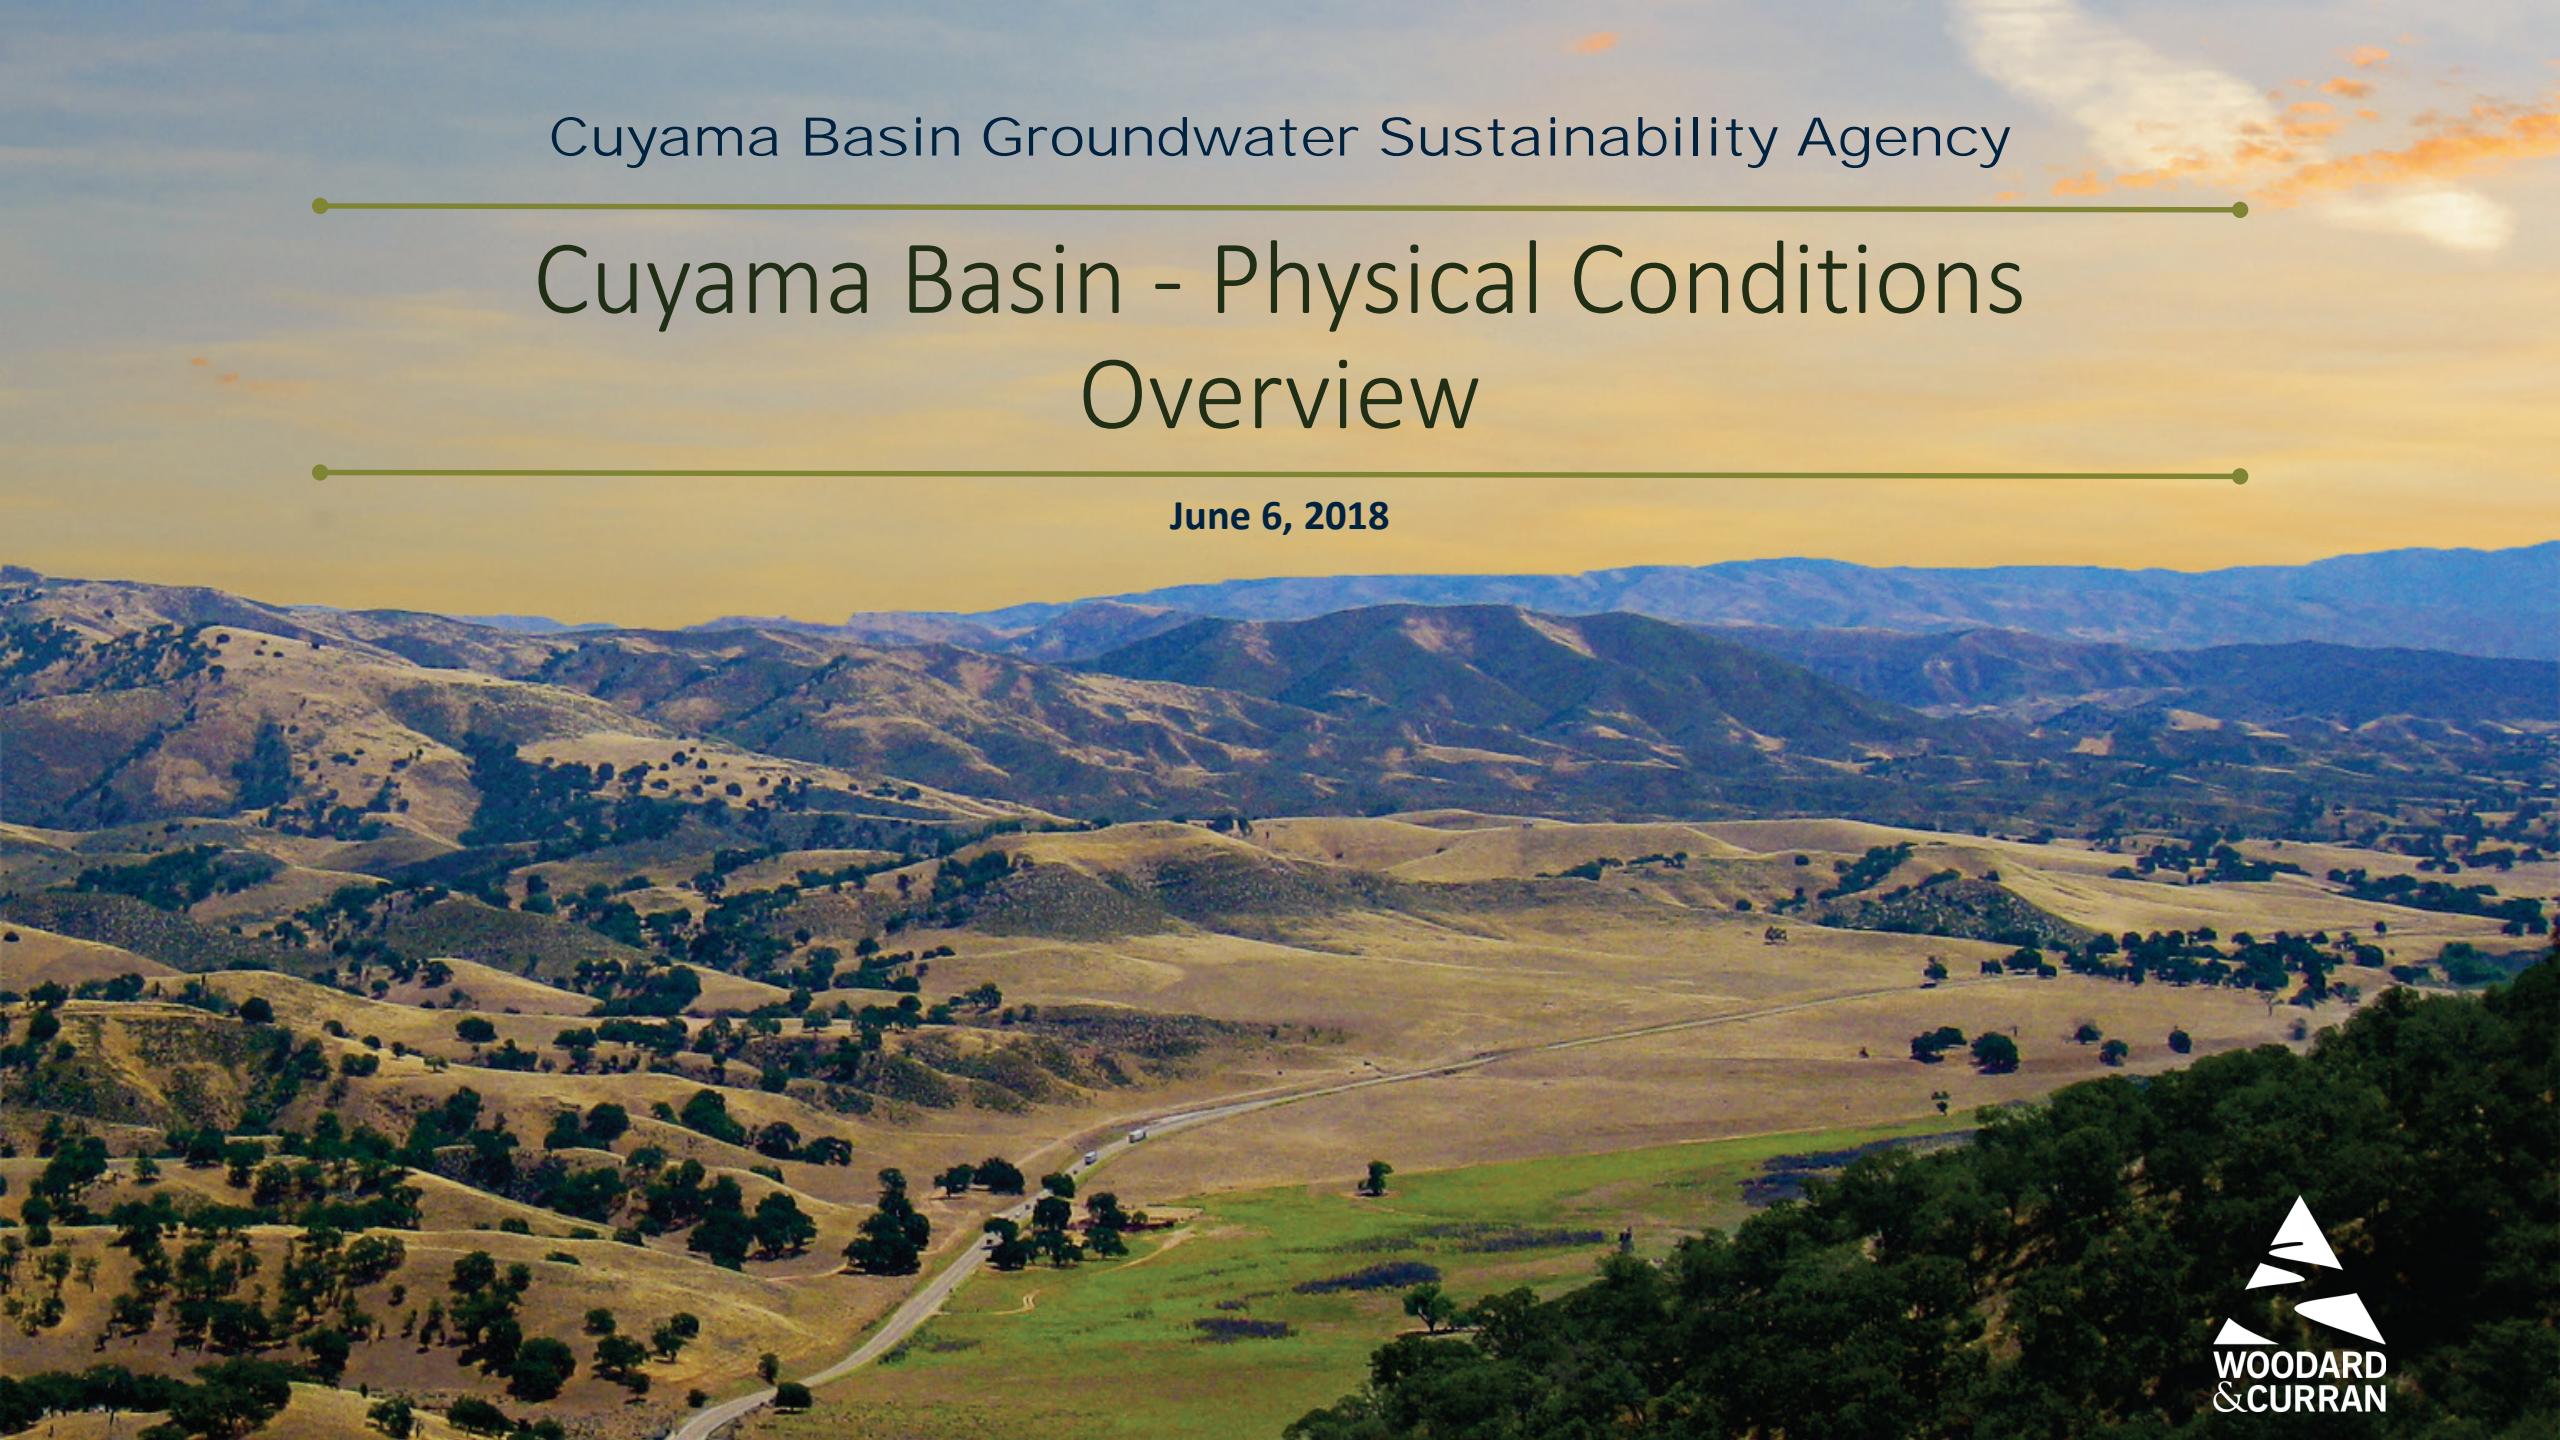

2018 Mar Apr May Jun Jul Aug Sep Oct

Components of a Groundwater Basin

- Groundwater aquifers
- Agricultural and domestic pumping
- Recharge
- Surface water interaction

Cuyama Basin Groundwater Sustainability Agency

Cuyama Basin - Physical Conditions Overview

June 6, 2018

Physical Conditions Overview

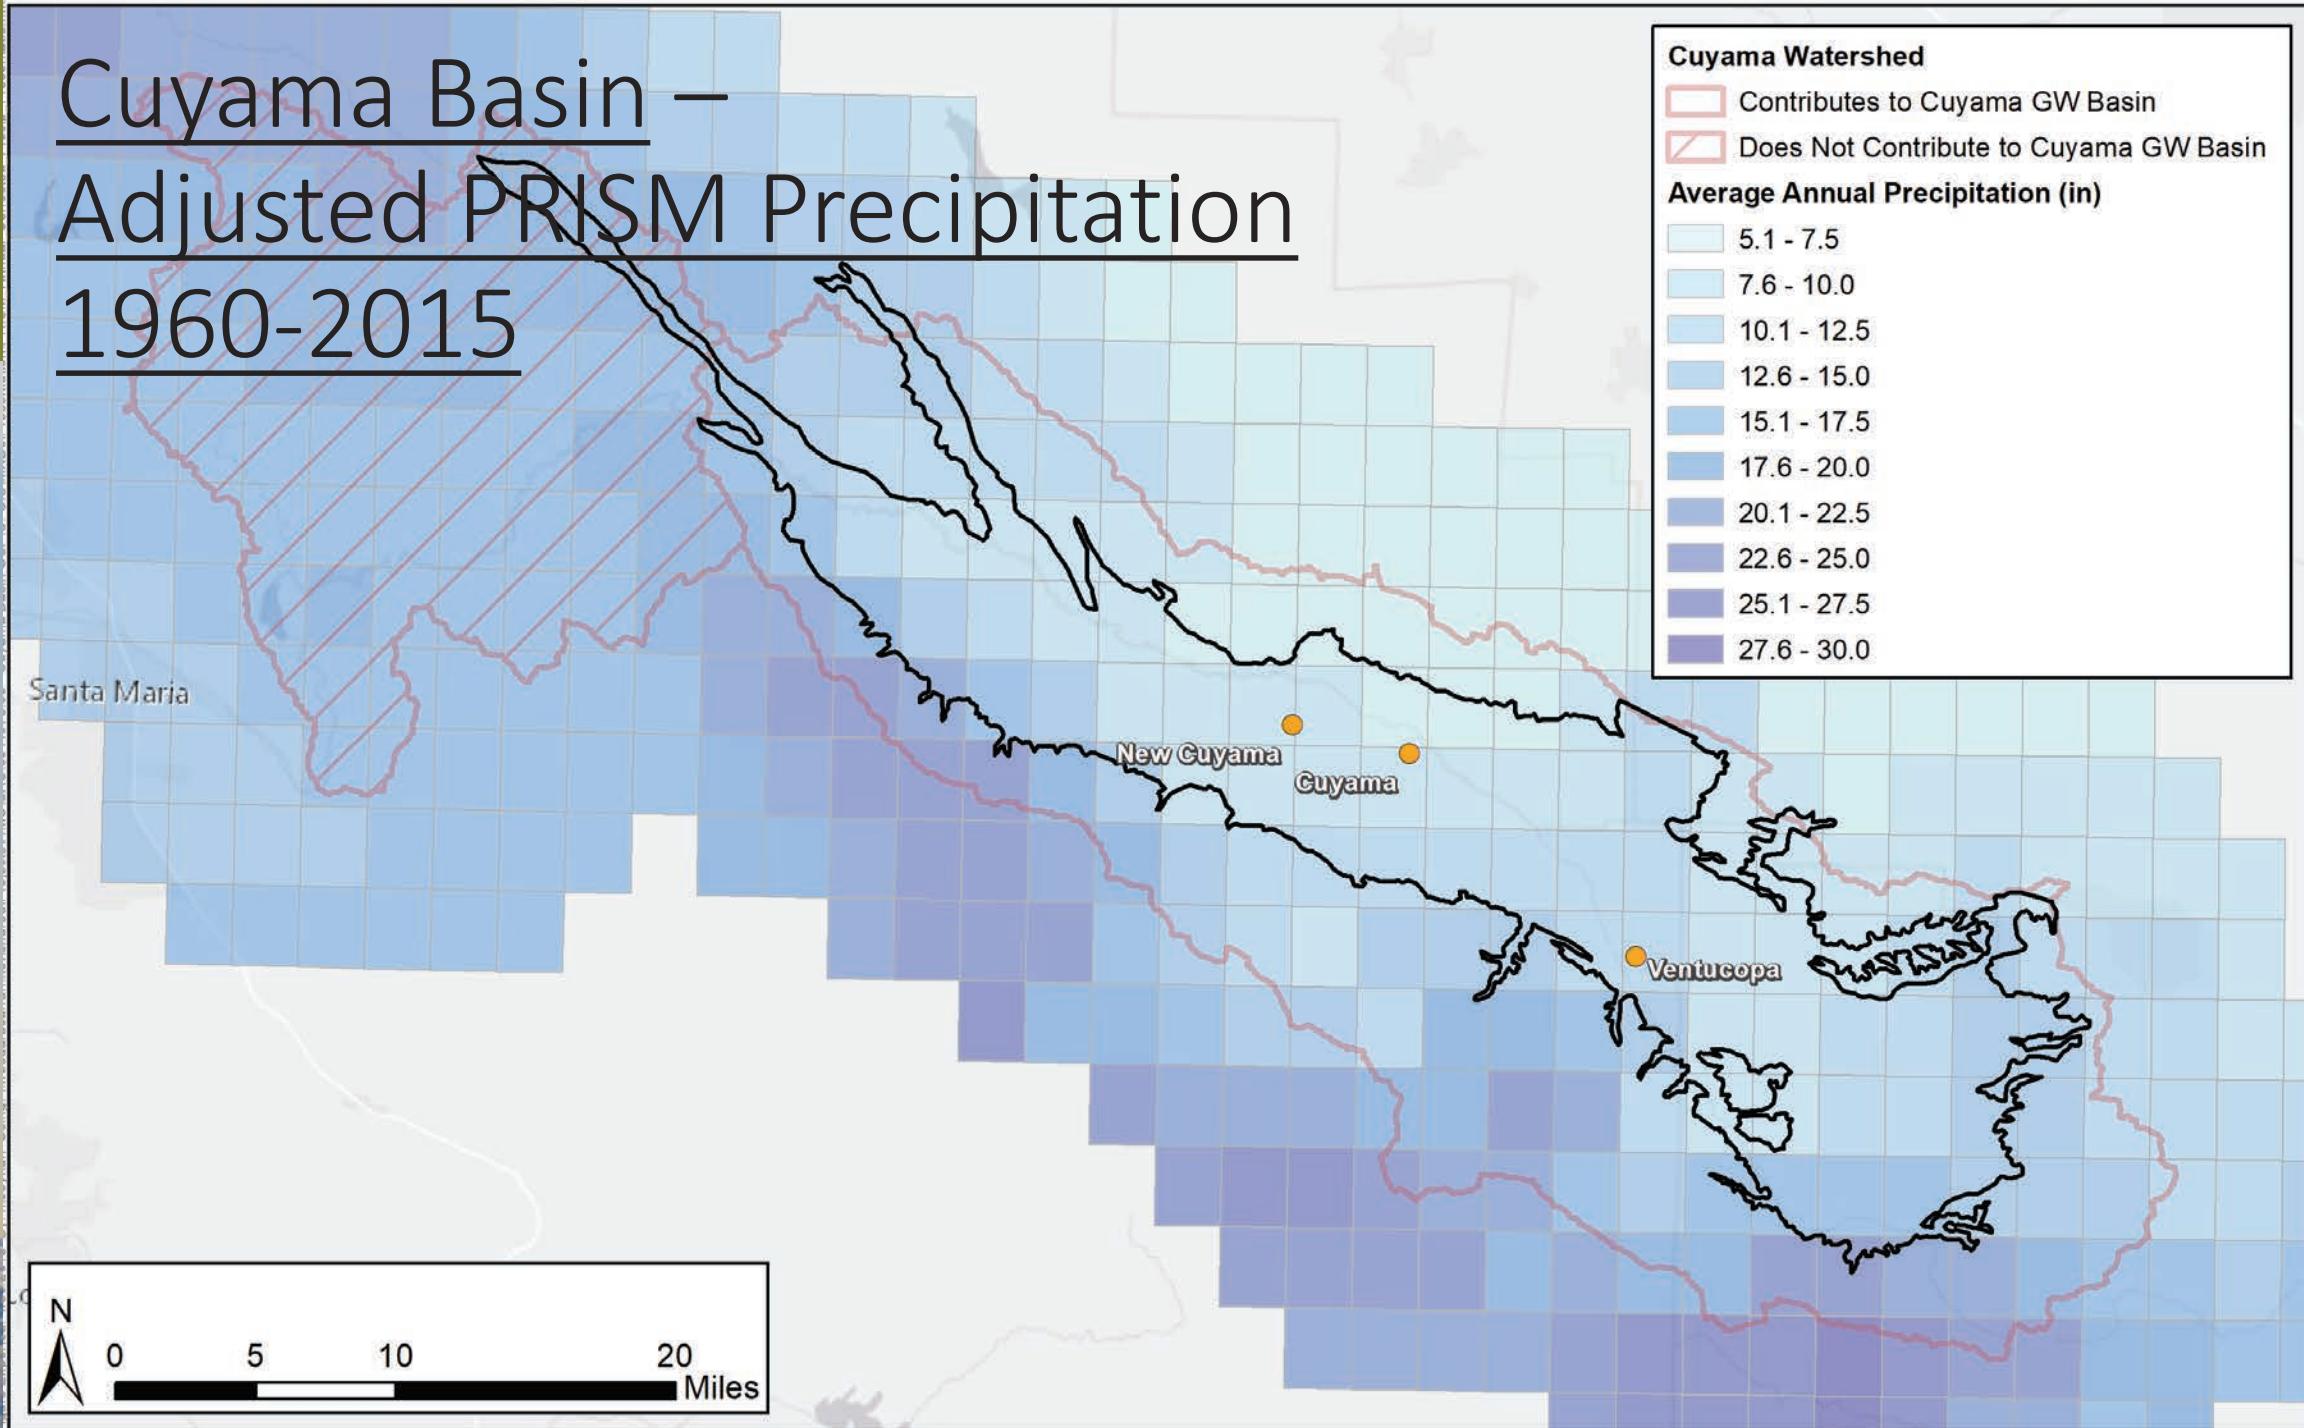

- Watersheds and Surface Water
- Rainfall
- Regional Setting
- Topography
- River and Groundwater Profile
- Geologic Maps
- Faults
- Model Layers

Cuyama Watershed and Major Streams

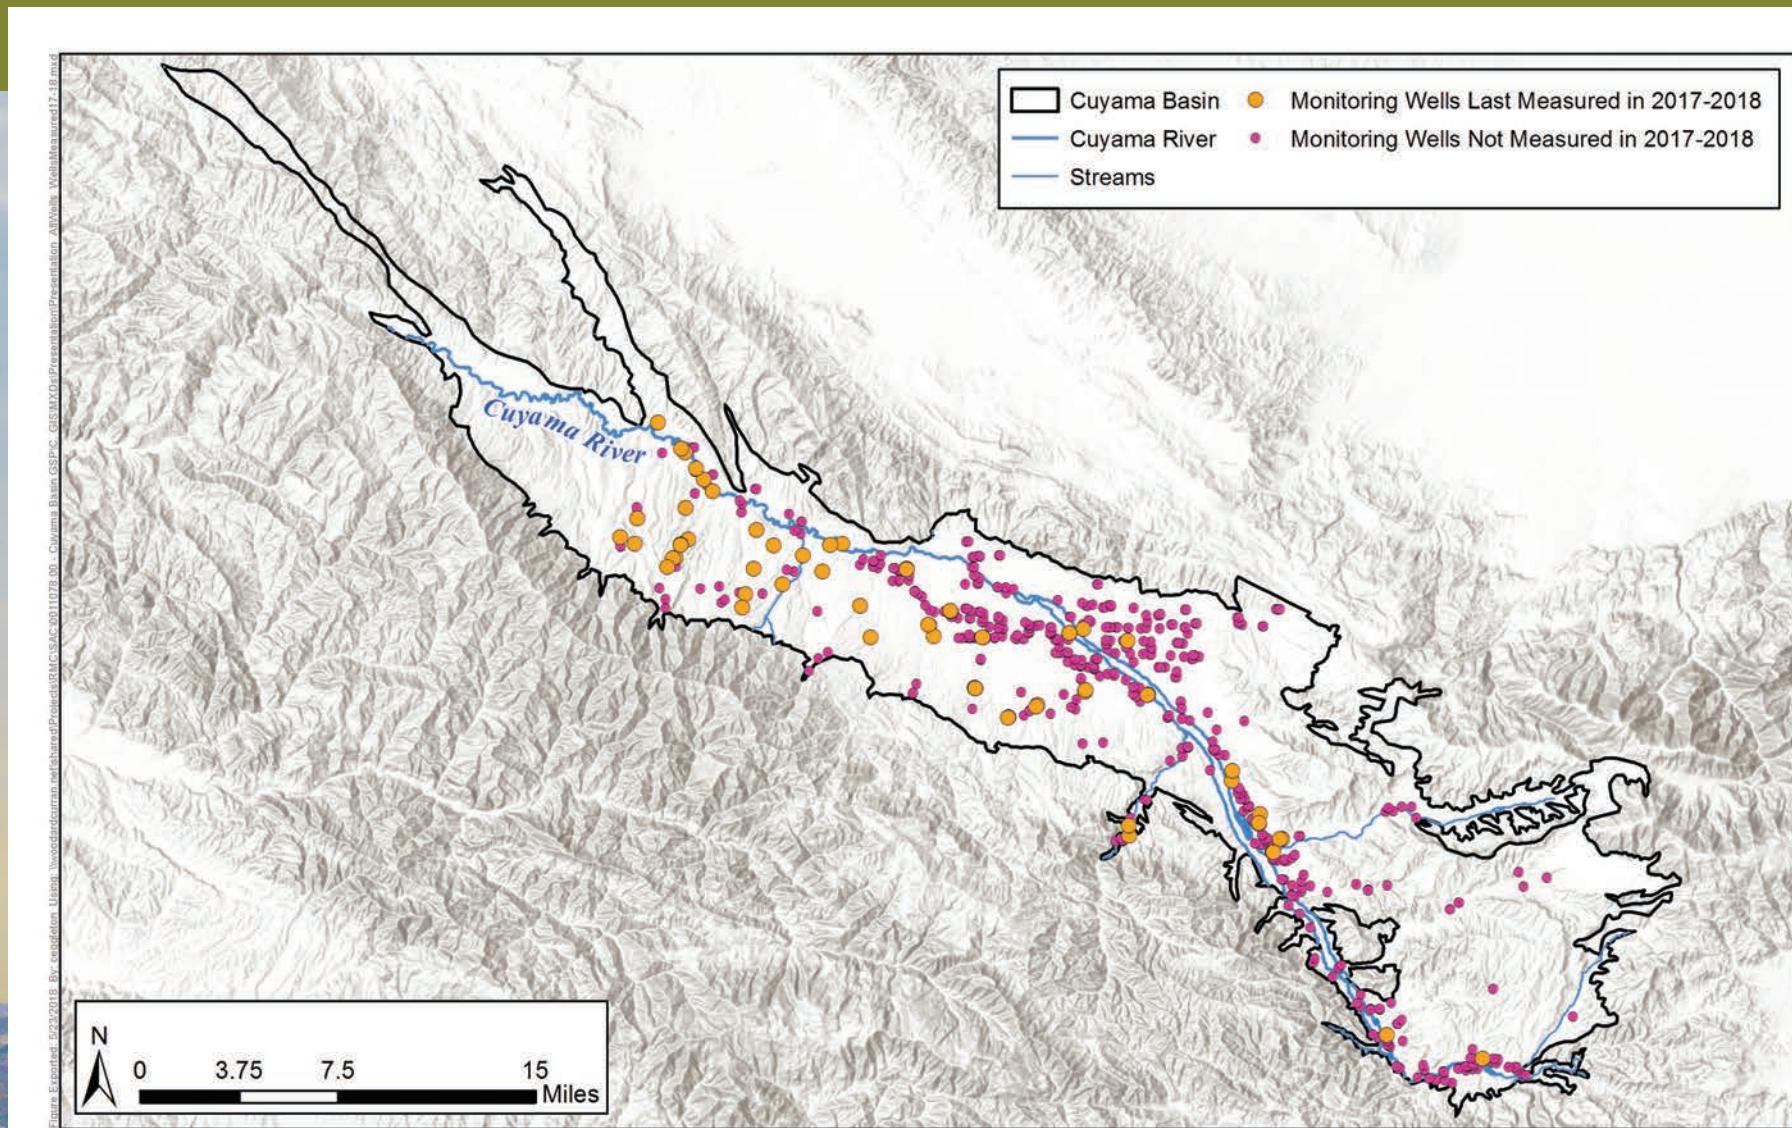

Cuyama Basin **Highways** **Cuyama Watershed**
Cuyama River **Local Roads** **Contributes to Cuyama GW Basin**
Towns **Streams** **Does Not Contribute to Cuyama GW Basin**

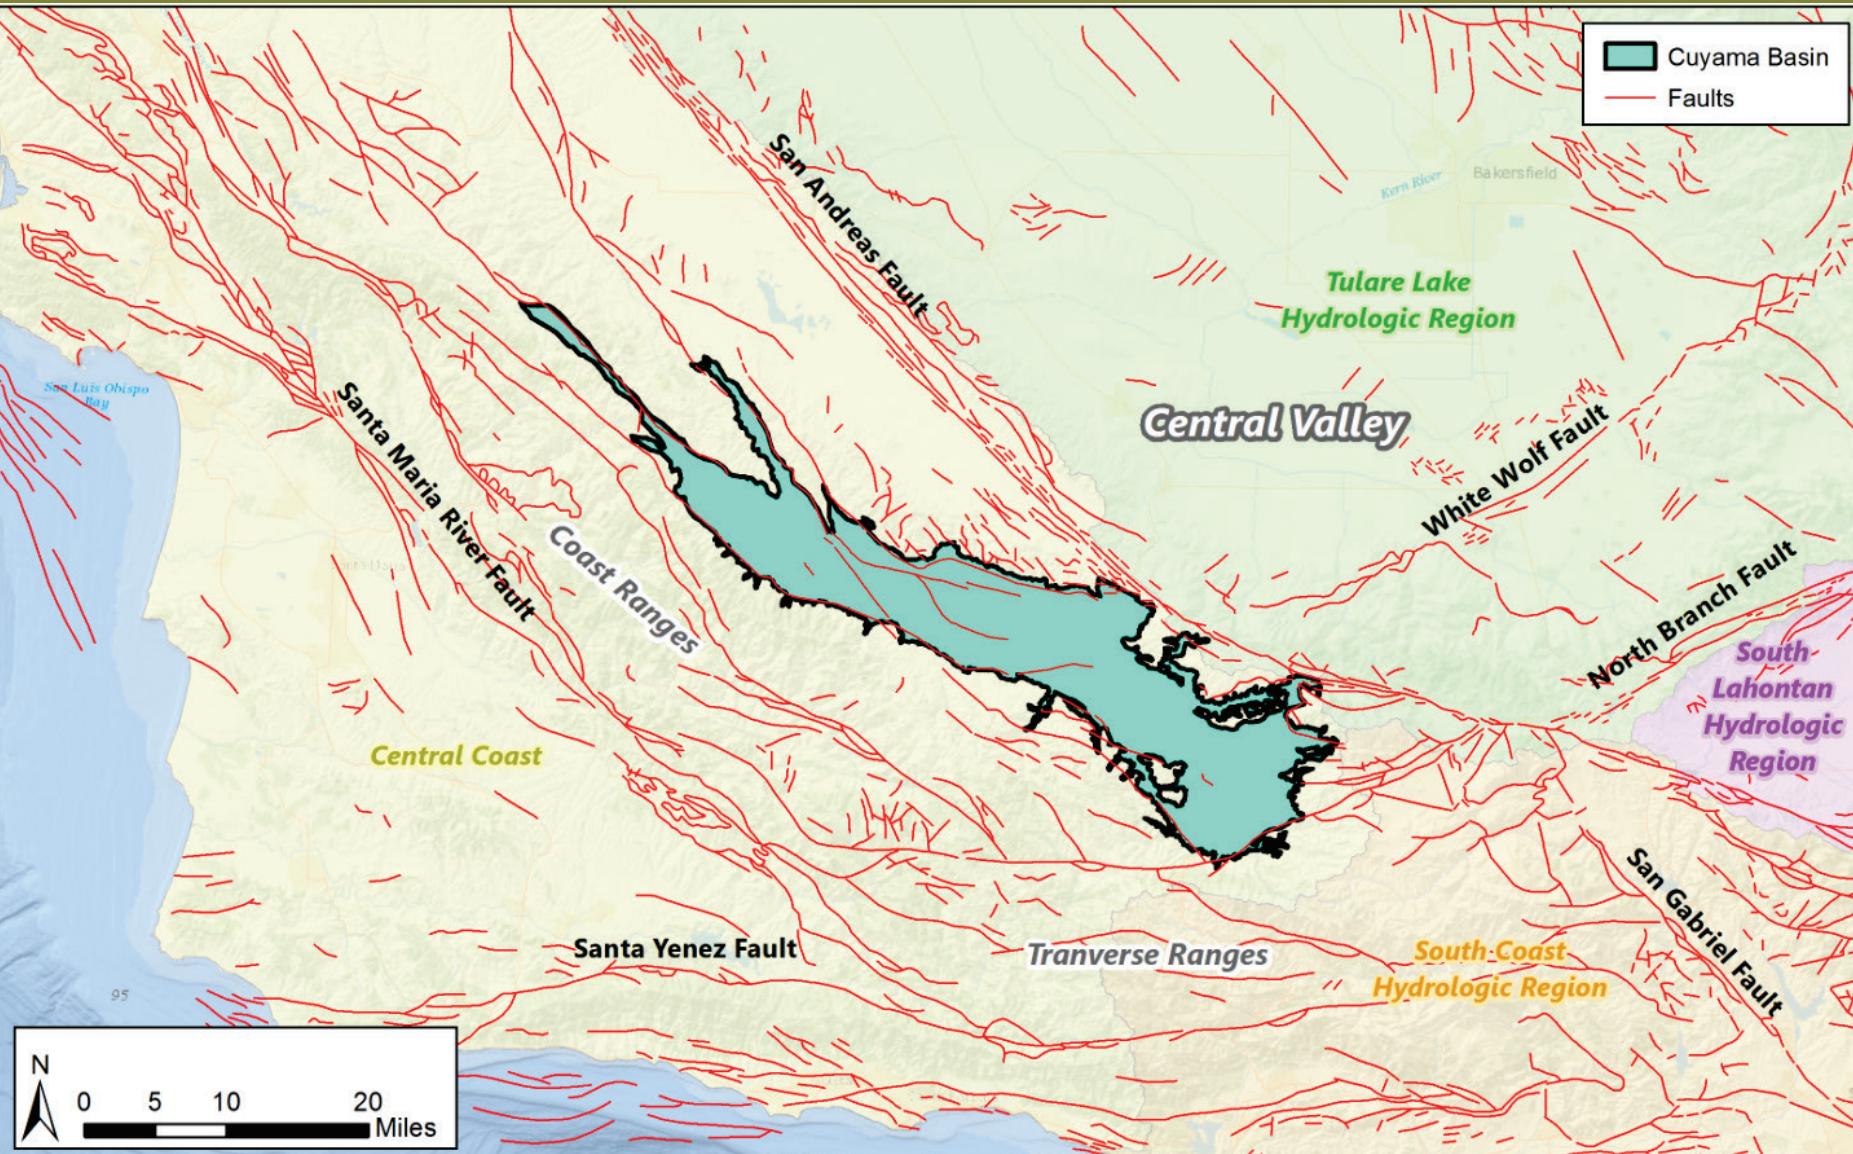

Cuyama Basin – Adjusted PRISM Precipitation 1960-2015

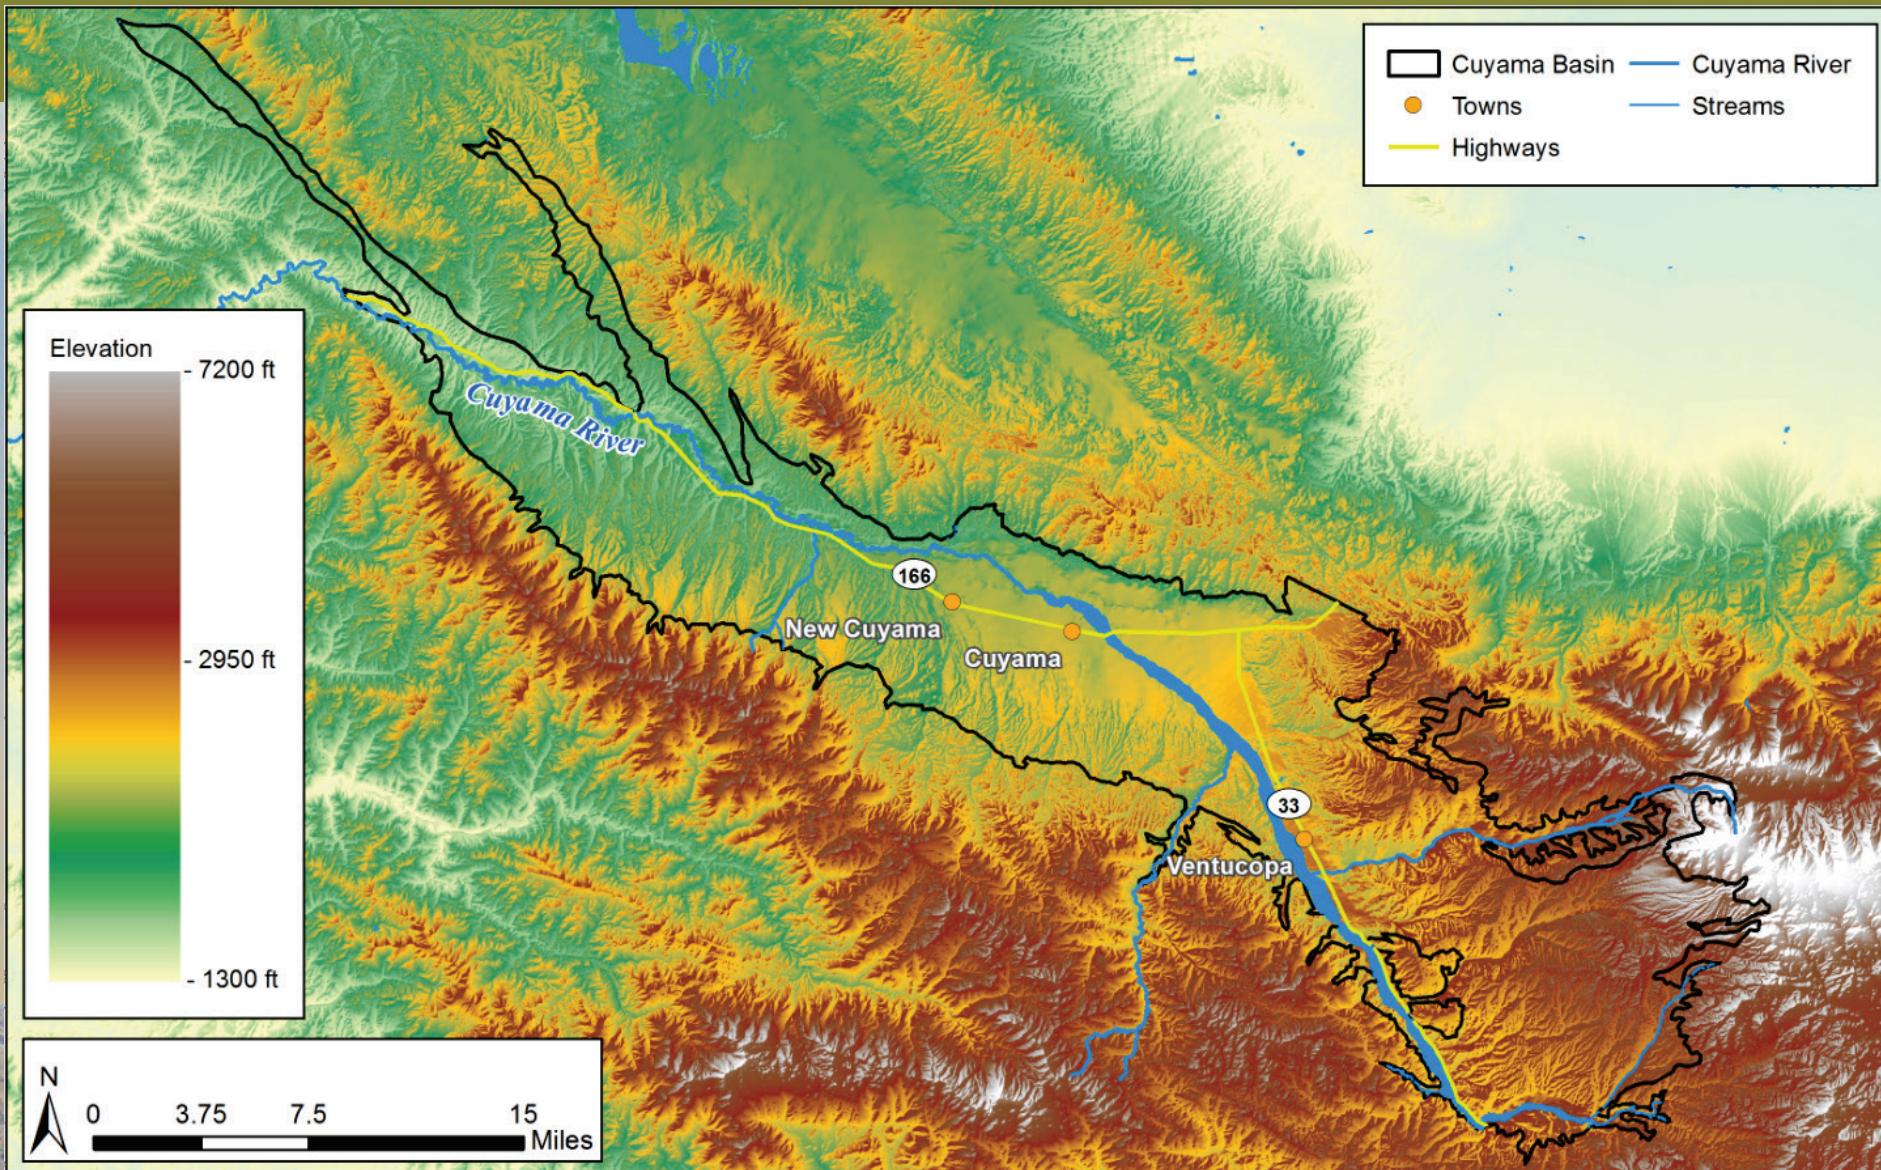

Groundwater Level Monitoring

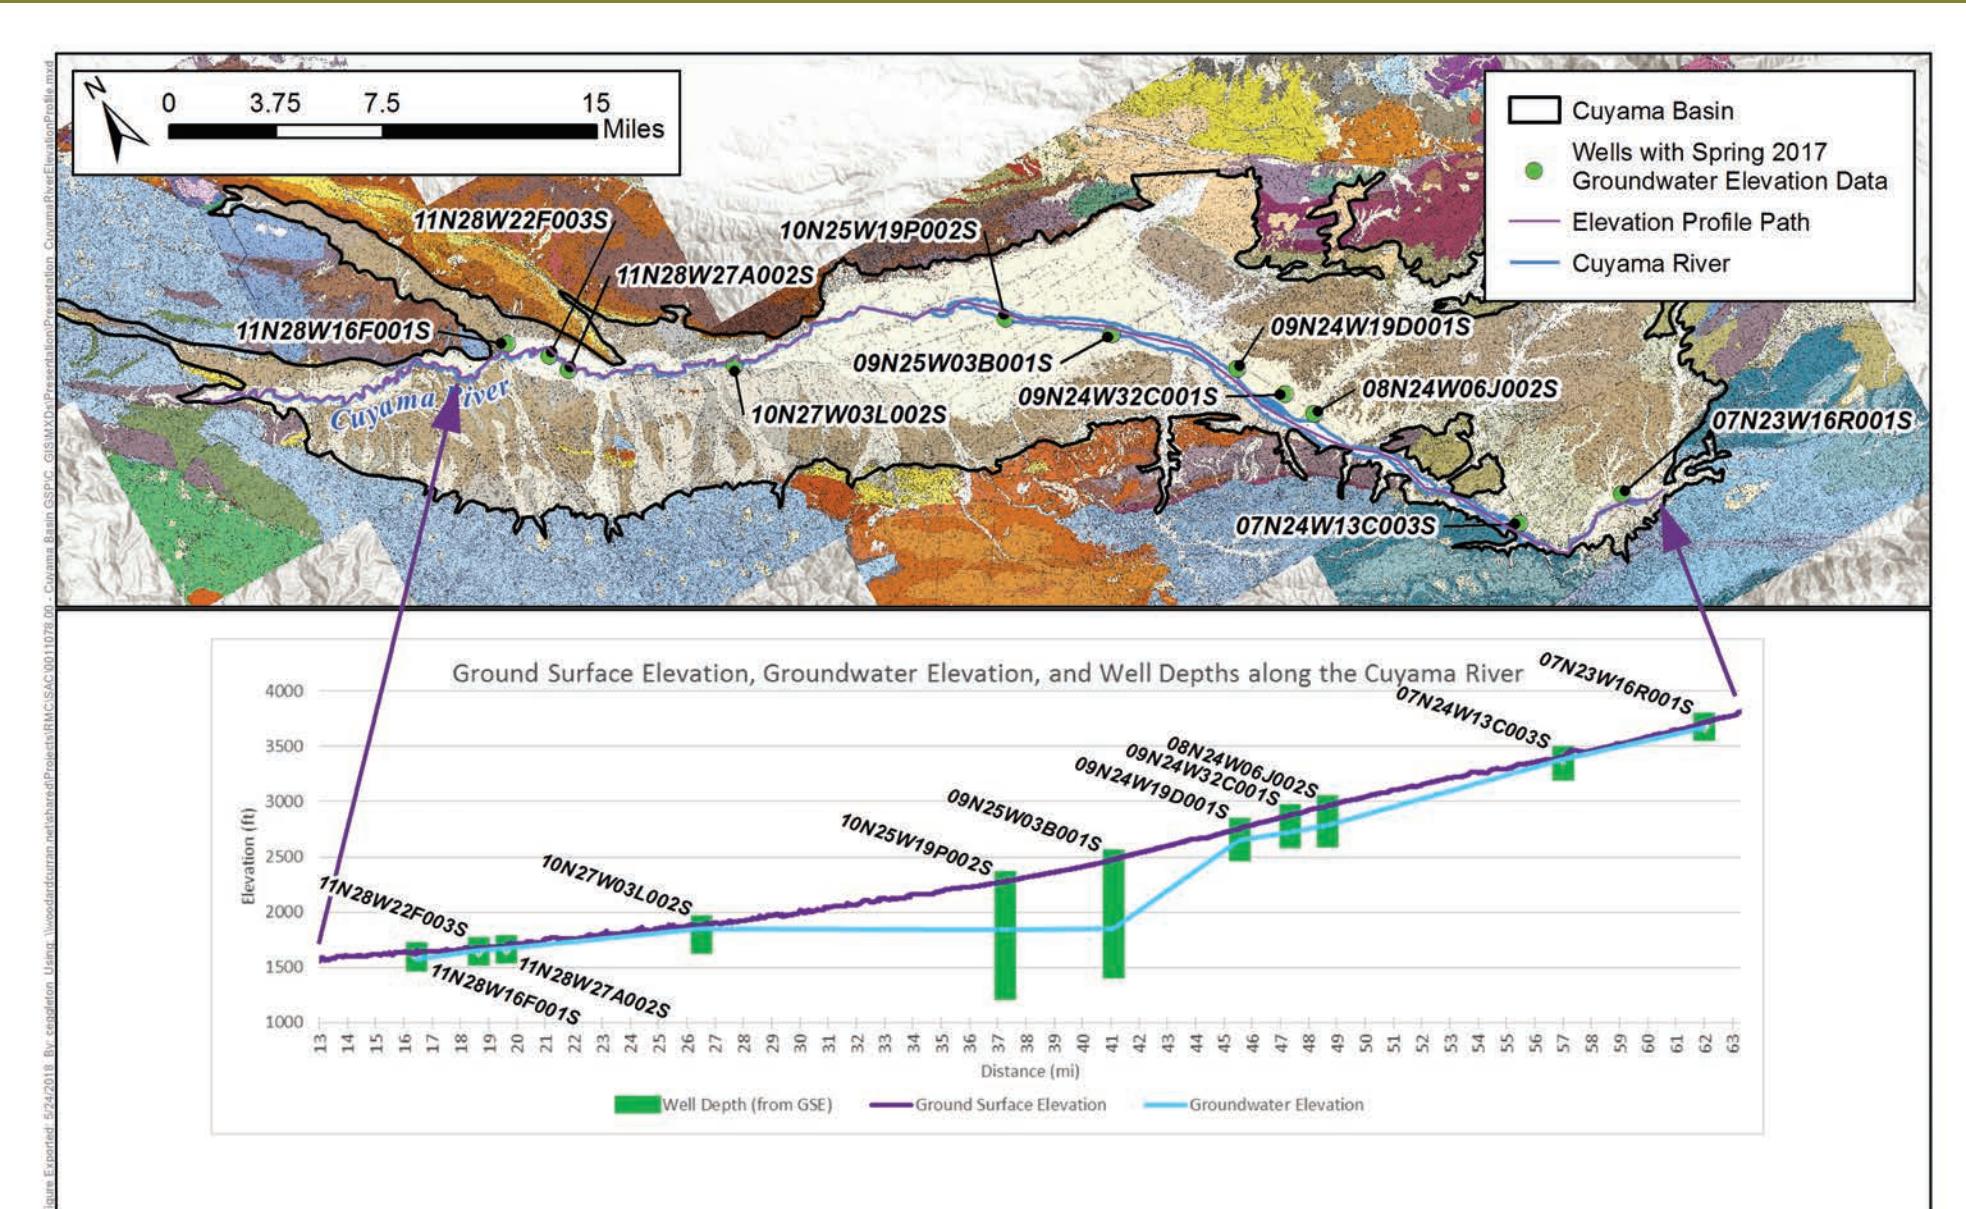

Regional Setting

Topography

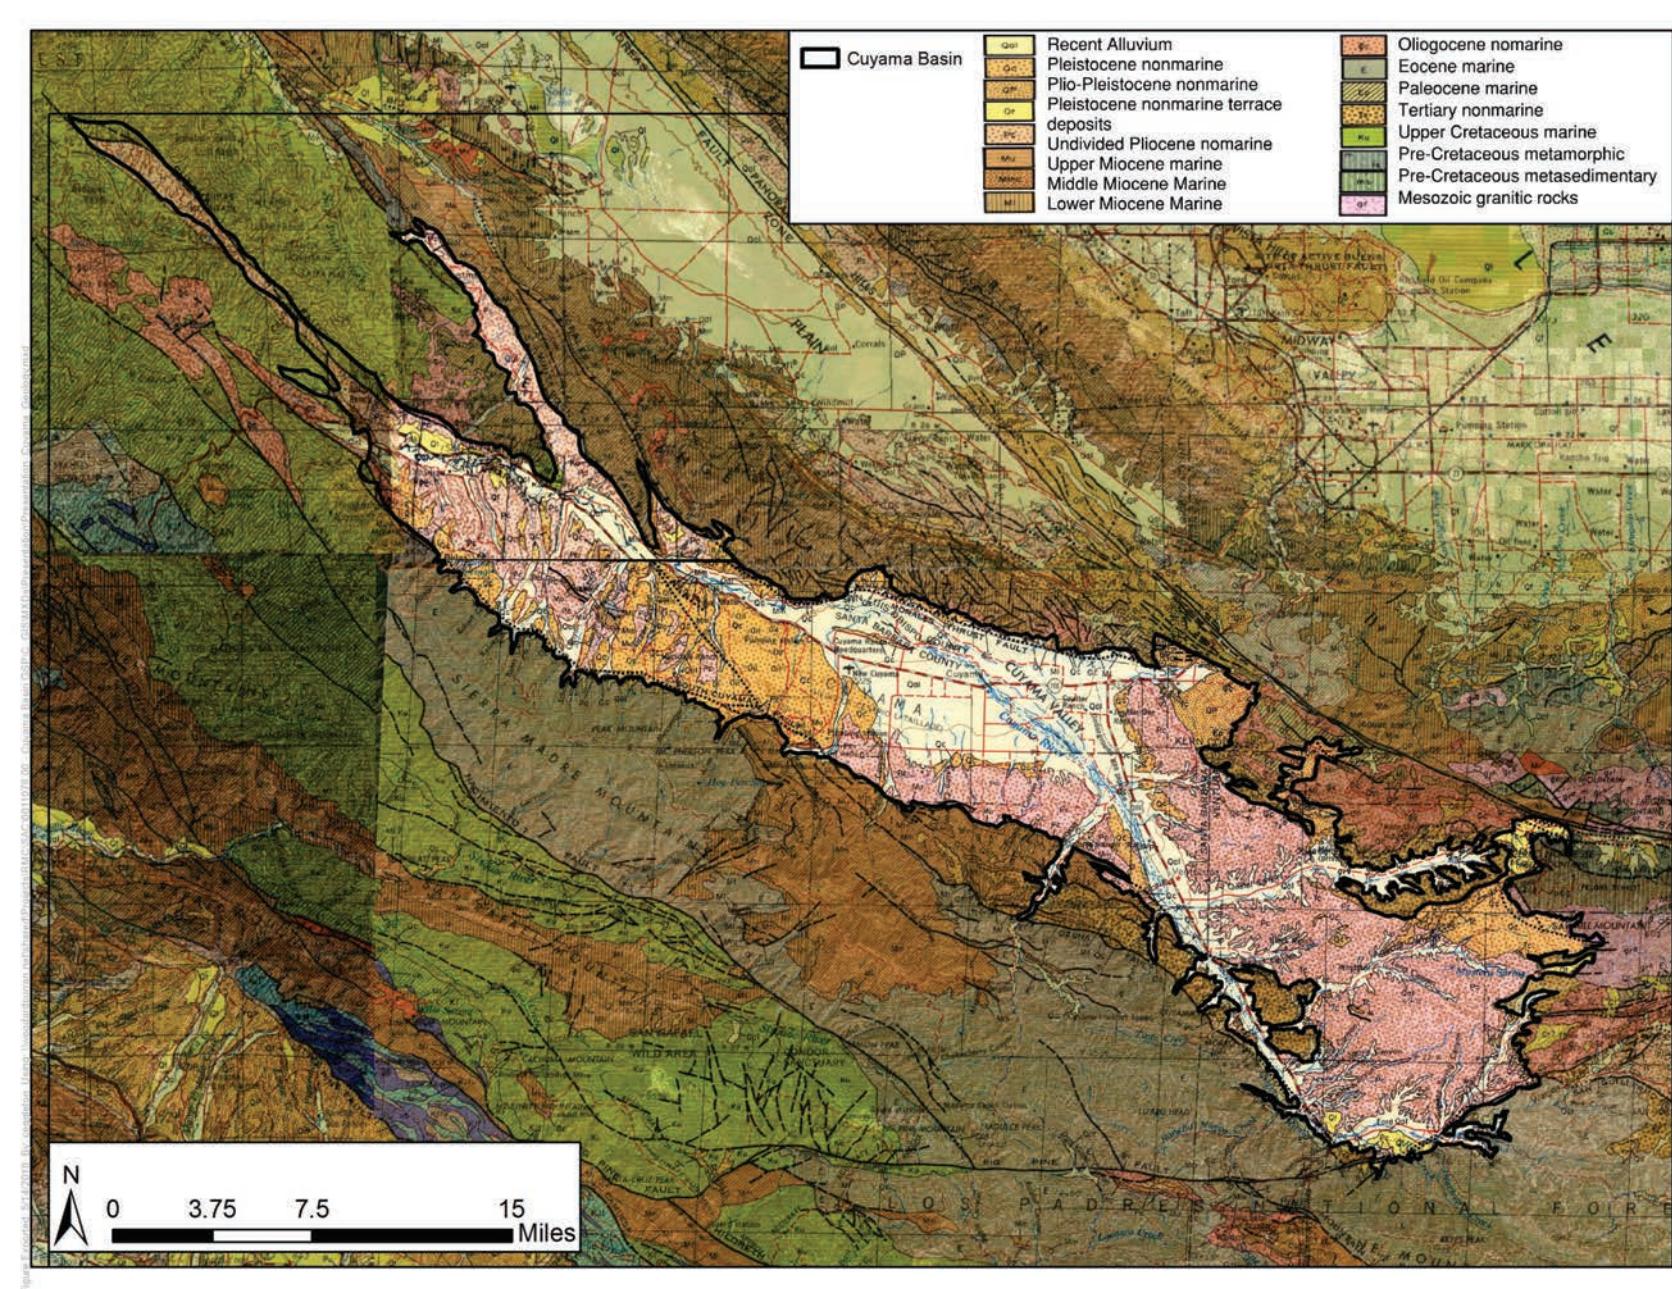

Ground Surface and Groundwater Elevation Profile

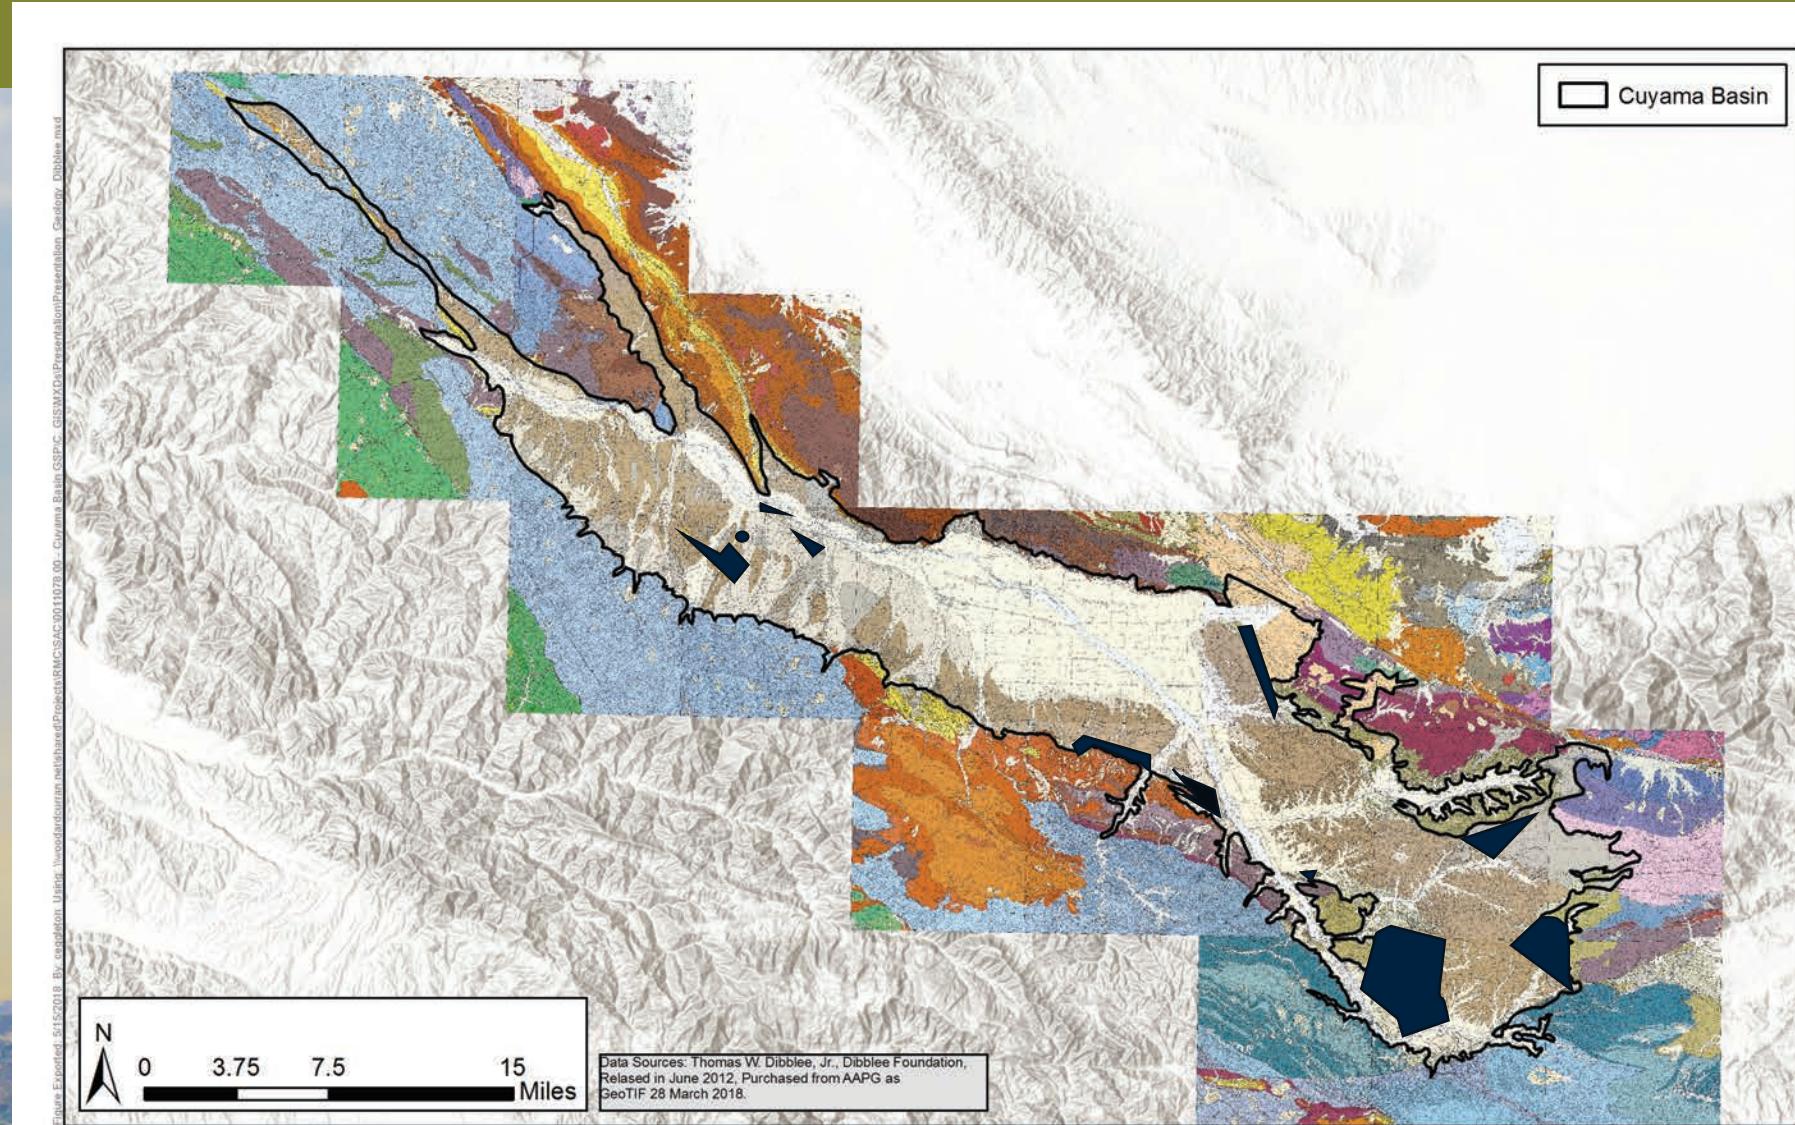

Geology

- 1:250,000 Scale
- Basin boundary defined at this scale
- Basin boundary is boundary between aquifer materials and bedrock

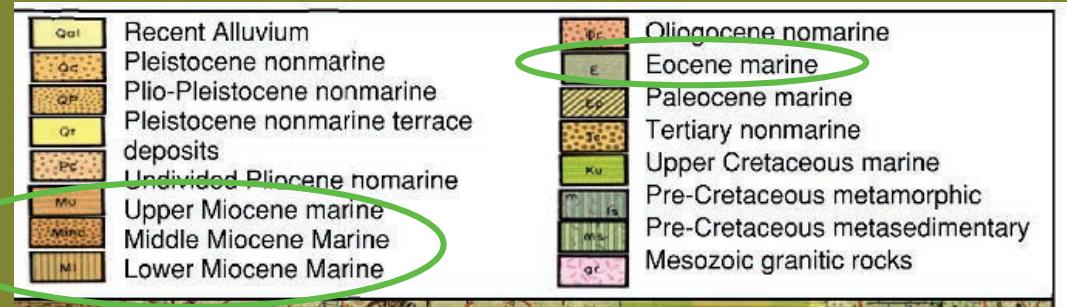

Geology

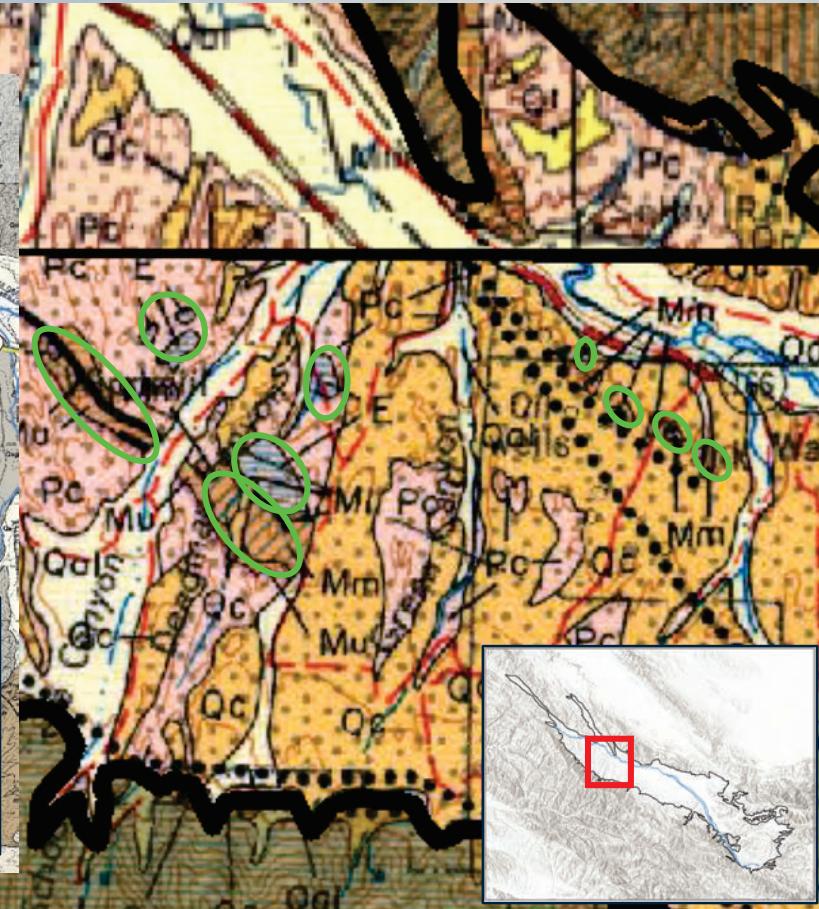

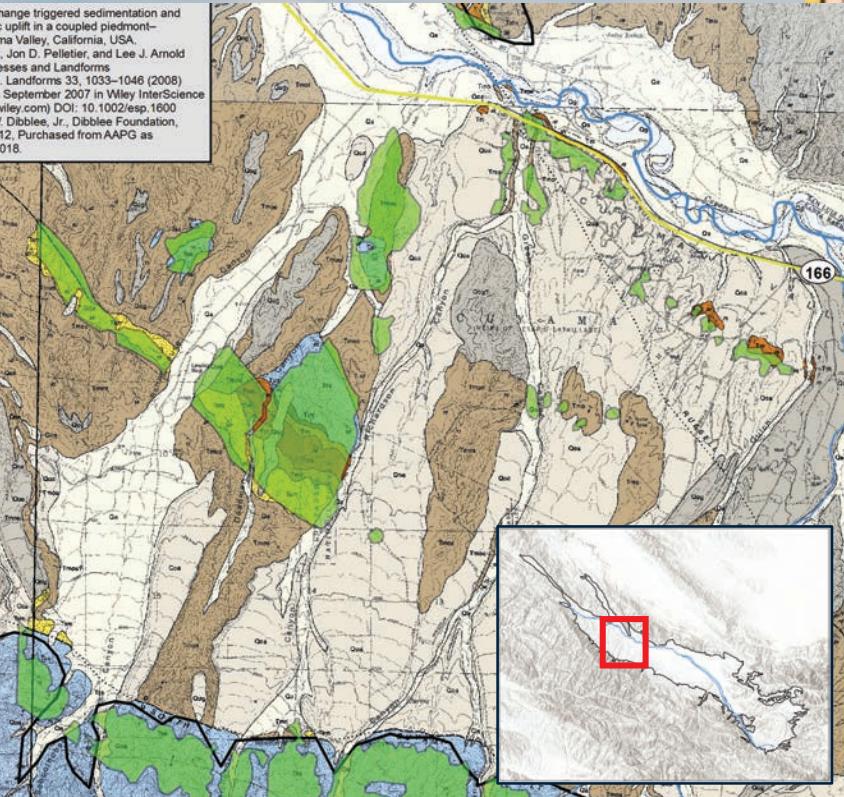

- Dibblee
1:24,000 scale
- Increased detail
- Outcrops in
basin

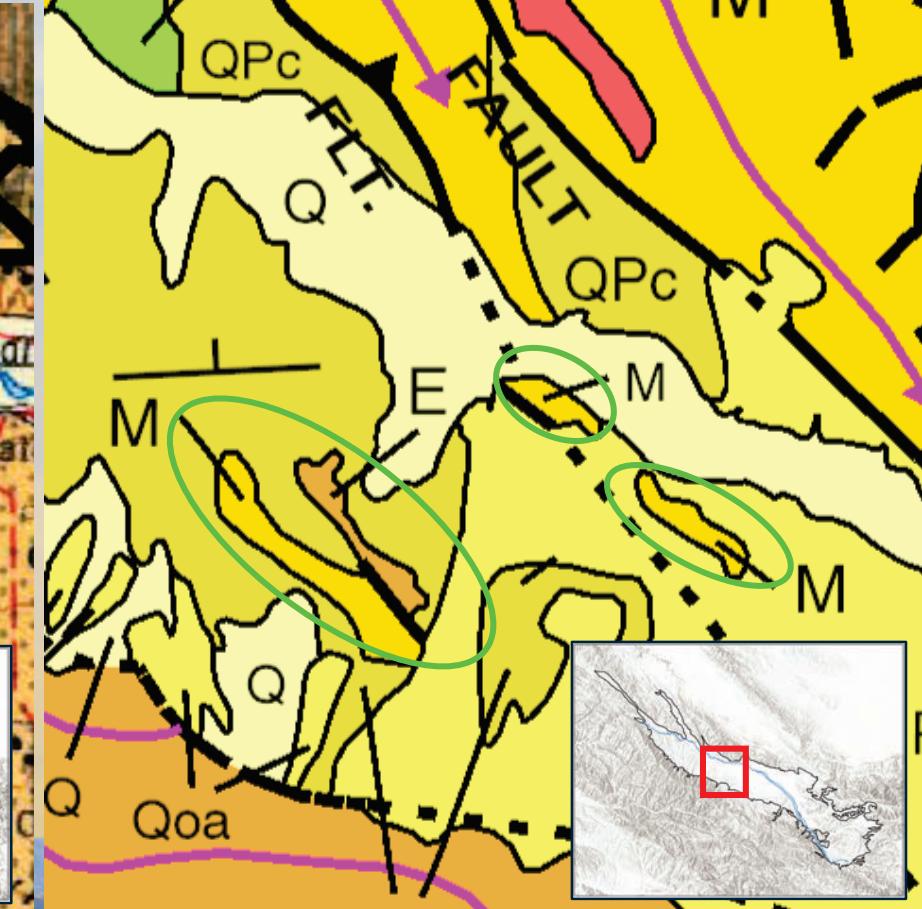

Geology

change triggered sedimentation and uplift in a coupled piedmont–valley system, California, USA. *J. Geophys. Res.*, 113, E00001, doi:10.1029/2005JB004018.

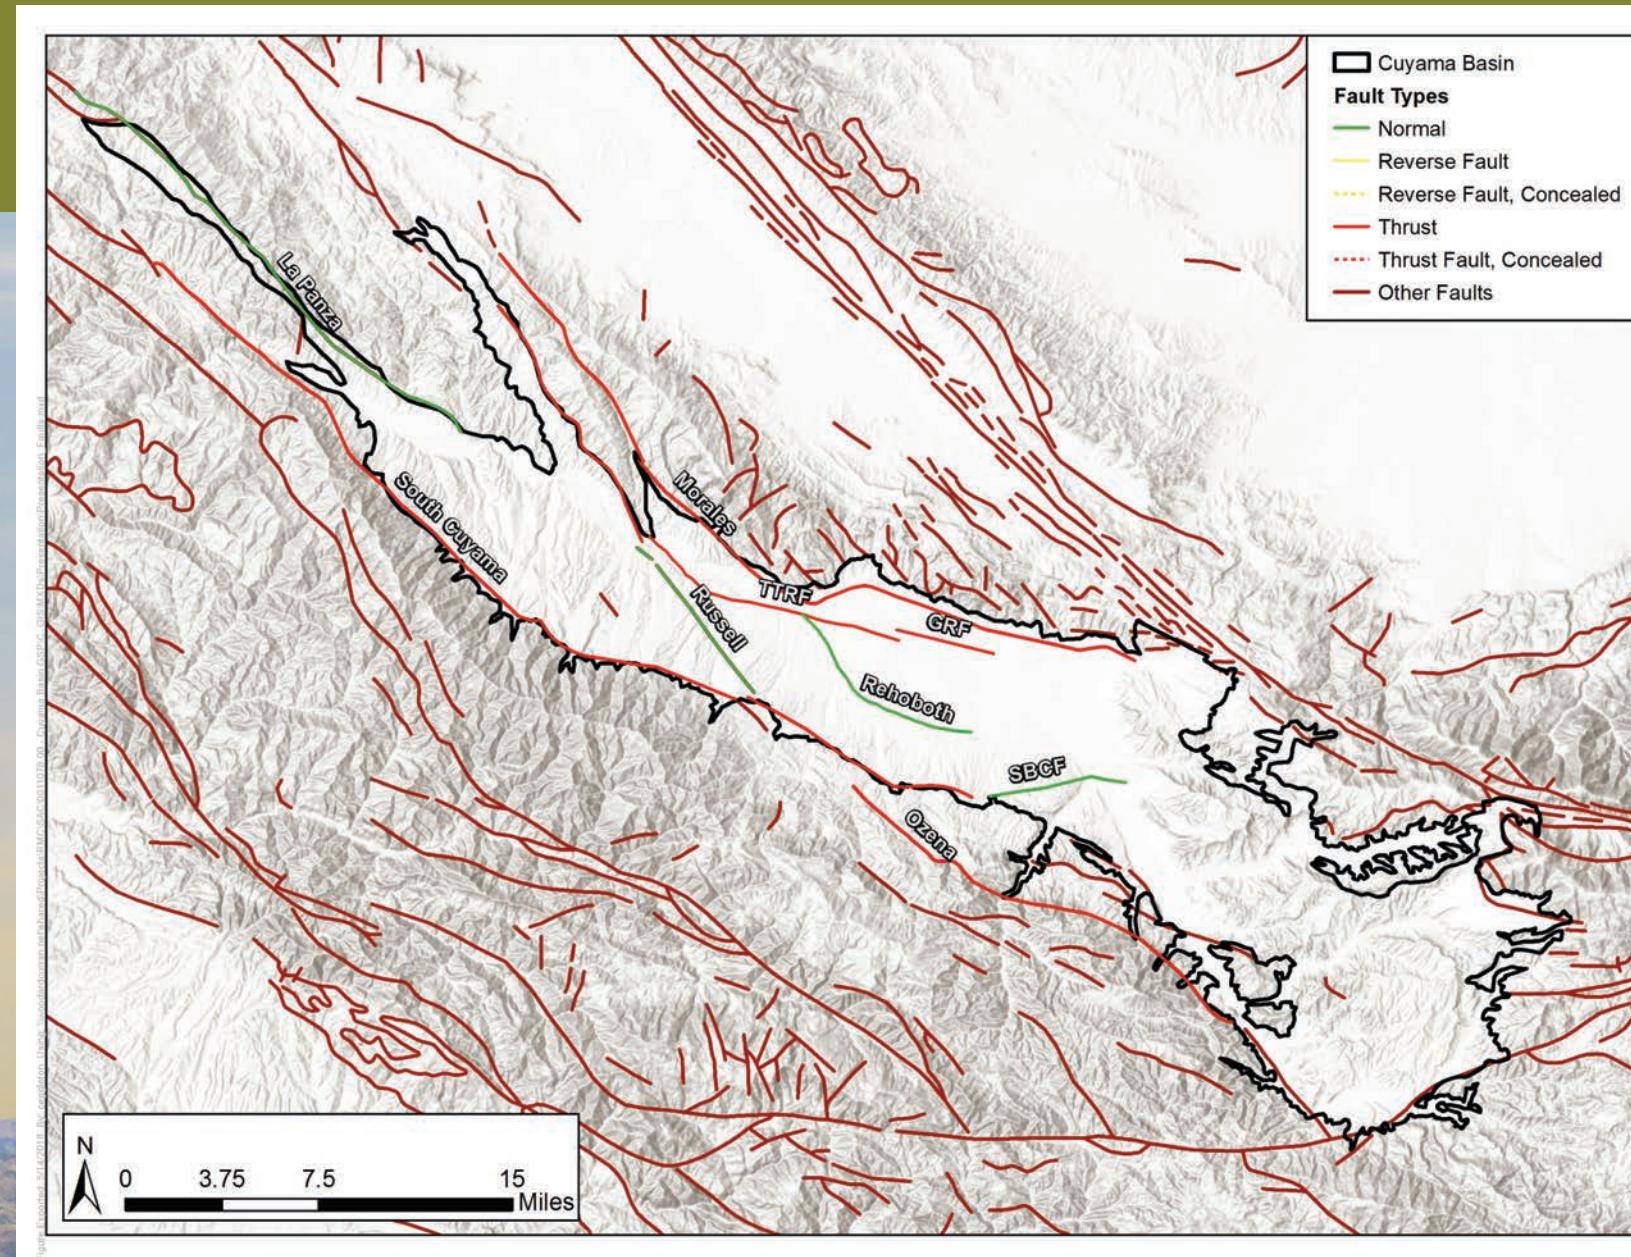

250k Map

750k Map

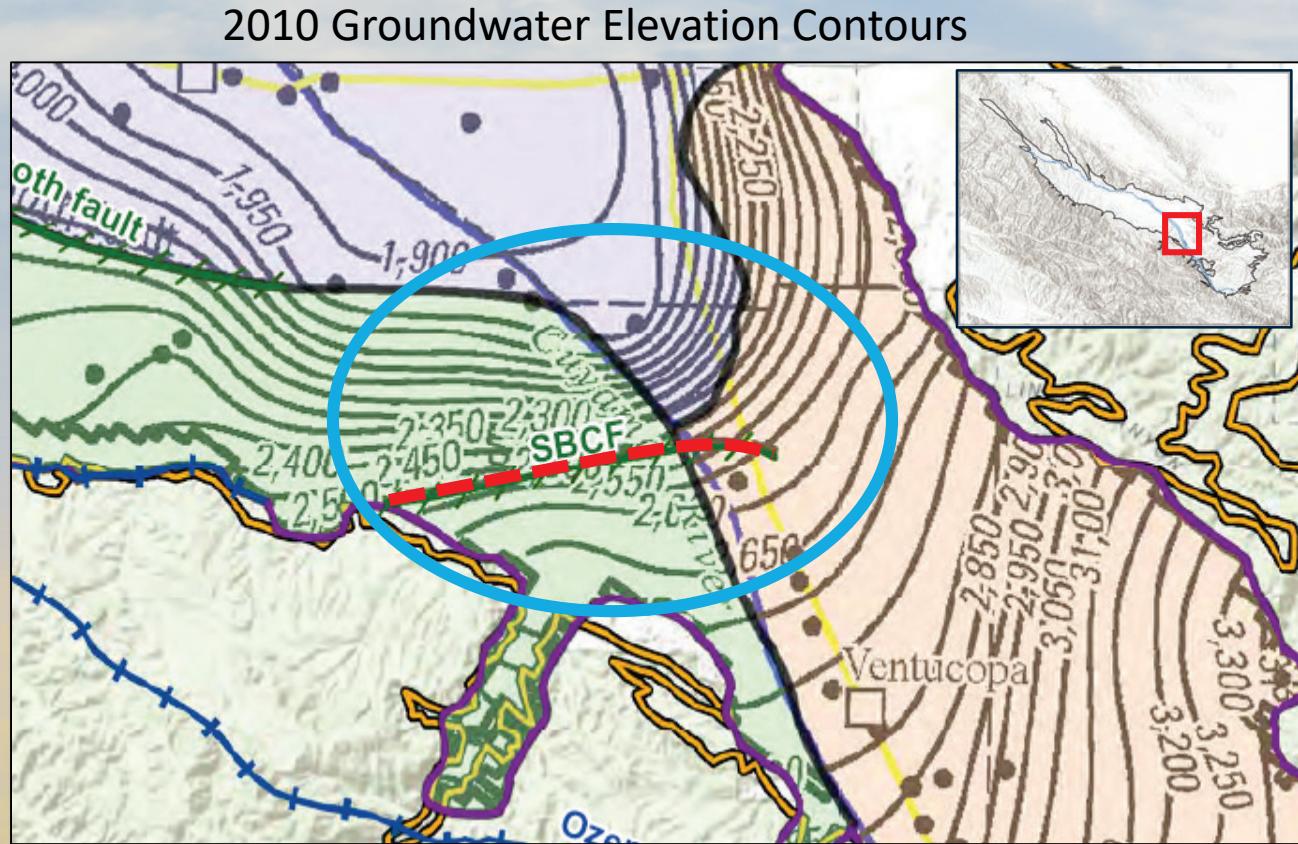

Faults

- Tectonically active region
- Faults form a portion of the basin boundary
- Faults also cross portions of the basin

Santa Barbara Canyon Fault

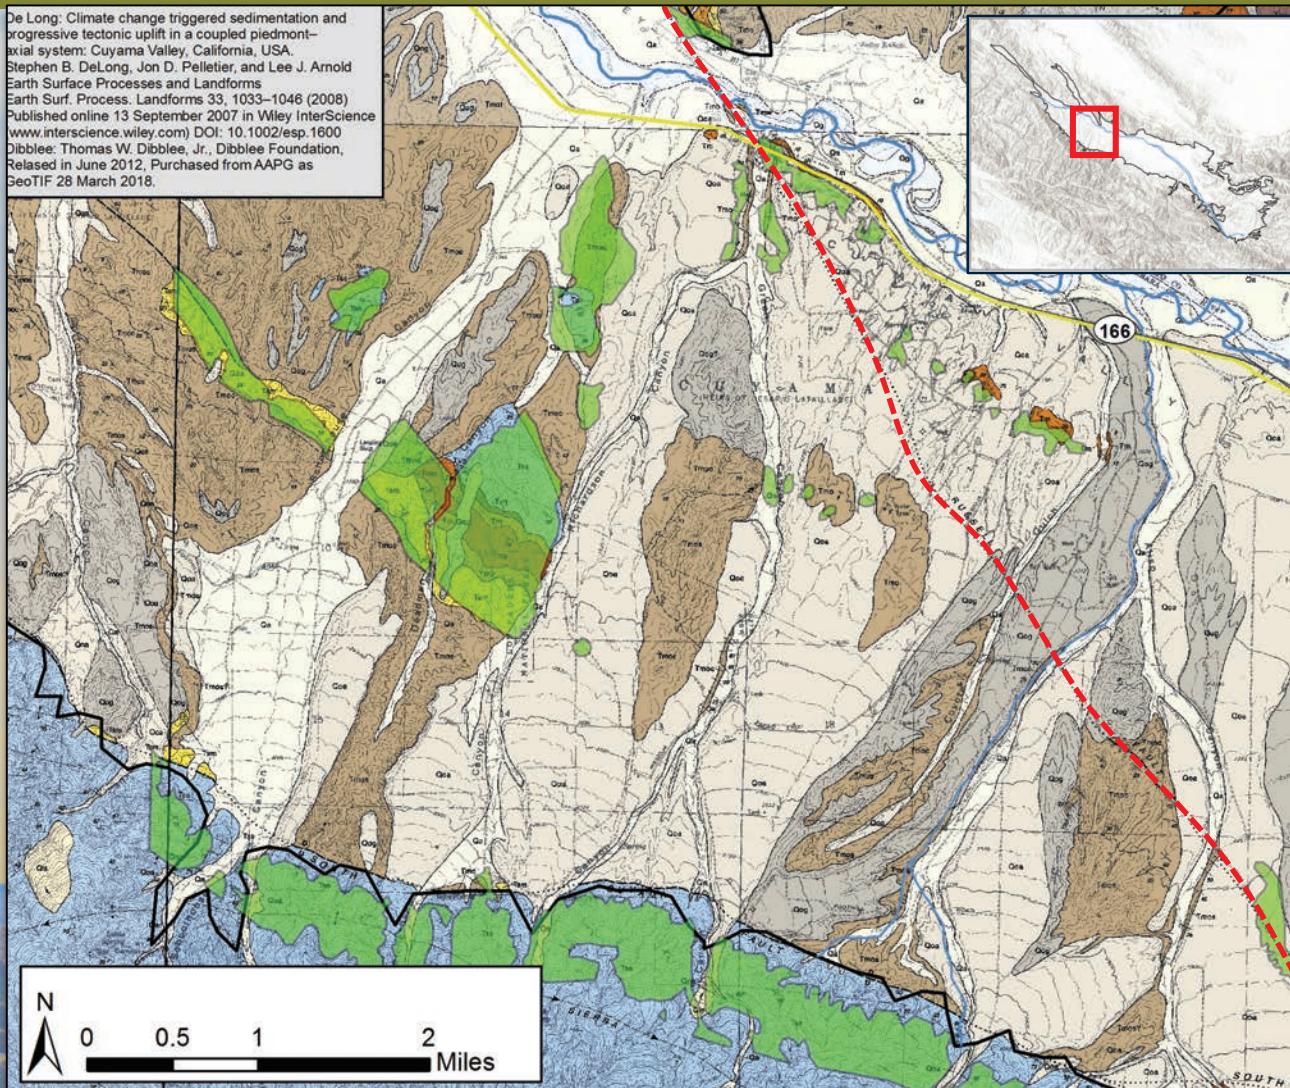

- Considered a barrier to flow in multiple references
- Steep hydraulic gradients at SBCF location
- Uncertain how far east it extends or how close to the surface it reaches
- Partial barrier to flow in region

Source: EKI 2017

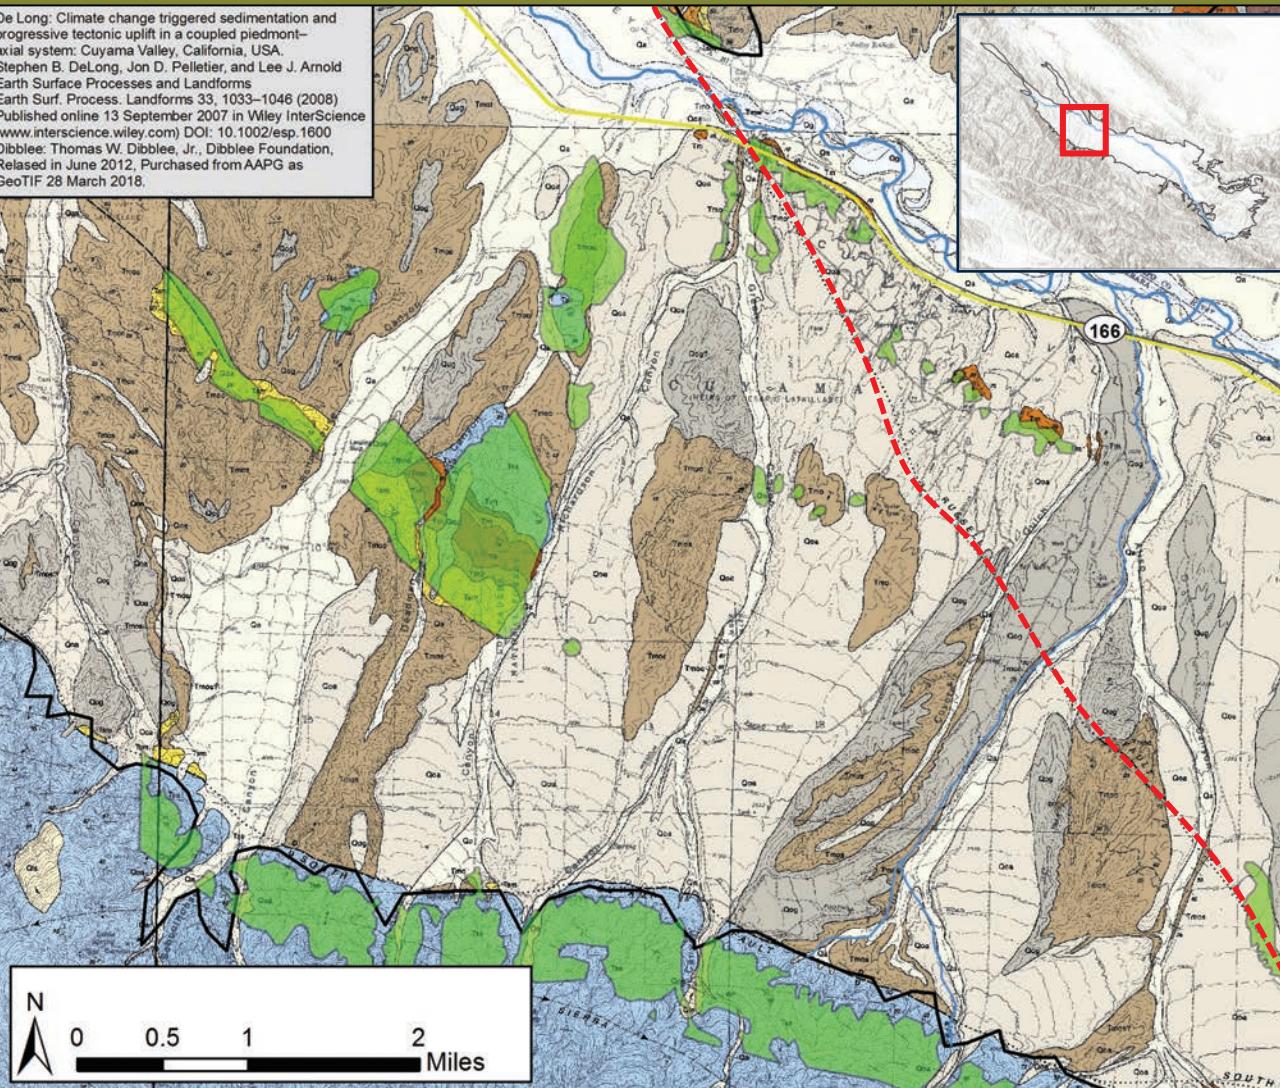

Russell Fault – Preliminary Conclusions

- Uncertain at this time if fault itself is barrier to flow
- Reduced thickness of Moraines and Alluvium to the west
- Outcrops of marine units restrict groundwater flow pathways

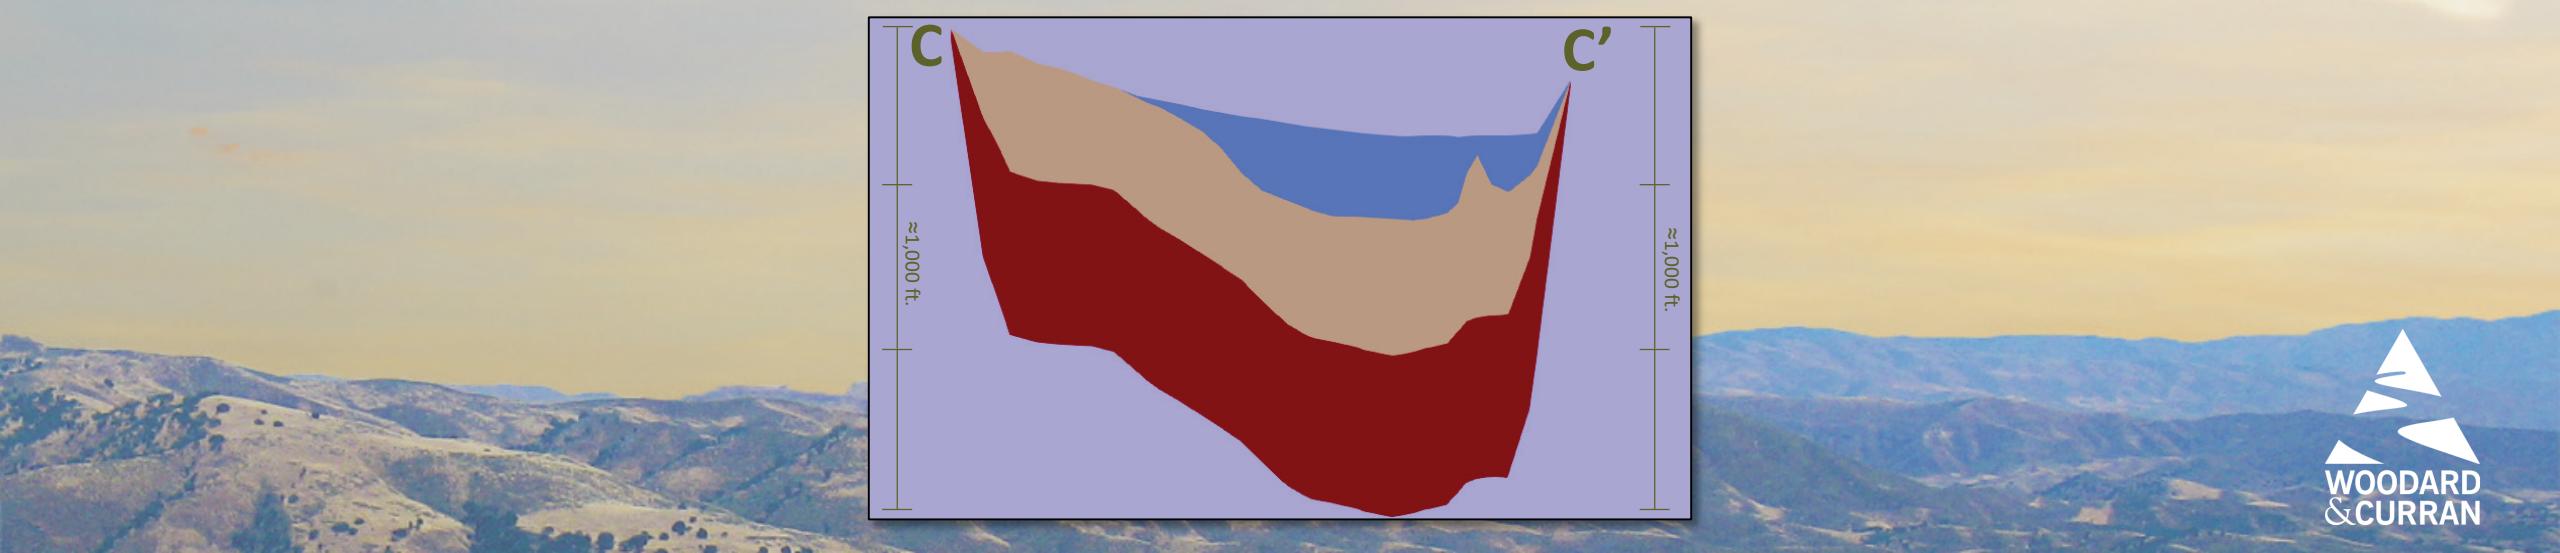

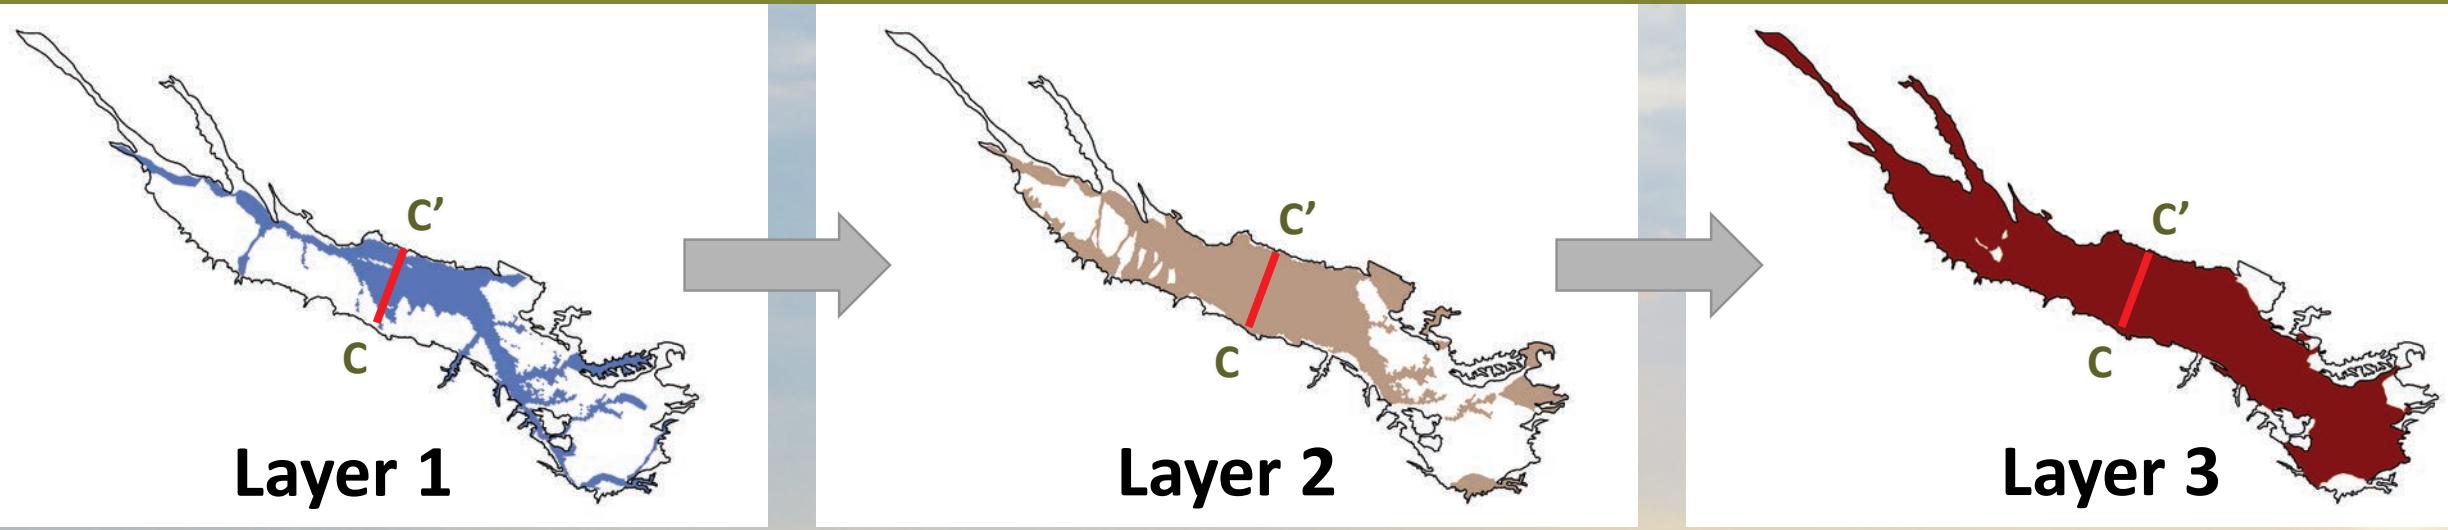

Russell Fault

- Refine fault understanding over time:
 - Continue monitoring on west side of fault
 - Additional study by GSA:
 - Expand monitoring grid (drill new wells or use existing) to have concurrent monitoring on both sides of fault
 - Other analysis
- Revise GSP with improved understanding at 5 year update

Three Model Layers Created to Represent the Basin Hydrogeology

Questions/Discussion

- Questions/Discussion about Cuyama Basin physical conditions

Cuyama Basin Groundwater Sustainability Agency

Interactive Discussion on Groundwater Sustainability in the Cuyama Basin

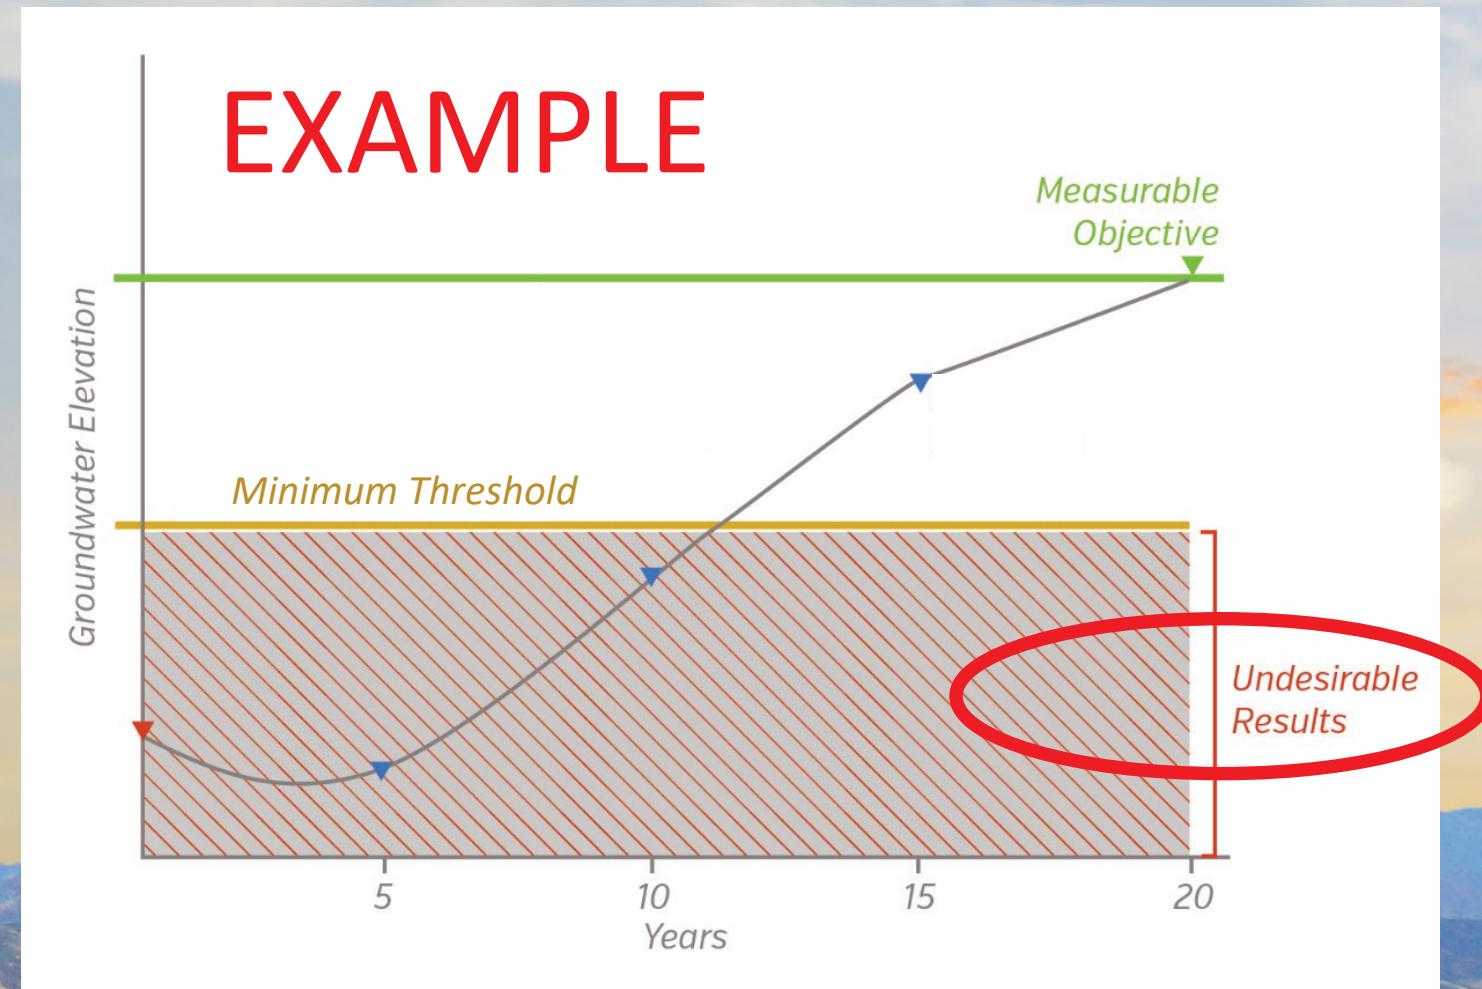

June 6, 2018

Sustainability Indicators in the Cuyama Basin

Sustainability Indicators	Lowering GW Levels	Reduction of Storage	Land Subsidence	Surface Water Depletion	Degraded Water Quality
Metrics Defined by SGMA	Groundwater elevation	Total volume	Rate and extent of subsidence	Volume or rate of depletion	Migration of plumes; constituent concentrations
Example Problems	Dry wells; low pumping production	Dry wells; low pumping production	Unleveling of fields; damage to structures	Dry out Cuyama River earlier / more often	Higher salinity; nitrates in drinking water

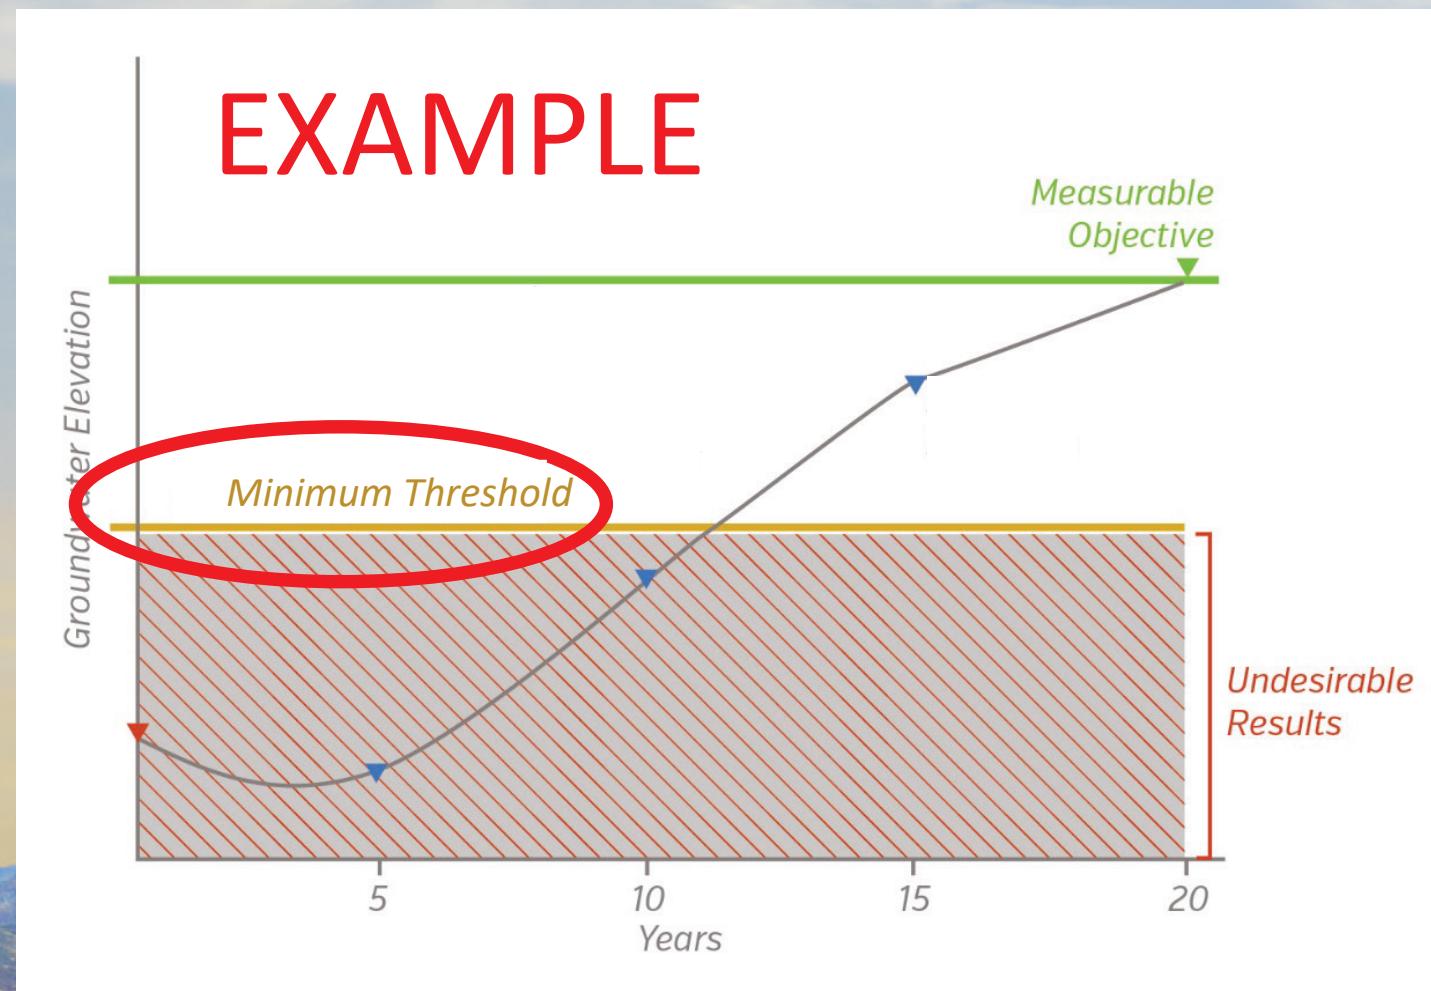

Undesirable Results, Minimum Thresholds & Measurable Objectives

- Undesirable Results:
 - Must be “Significant and Unreasonable”
 - Statement that describes conditions that we do not want to have happen
 - Defined for each sustainability indicator

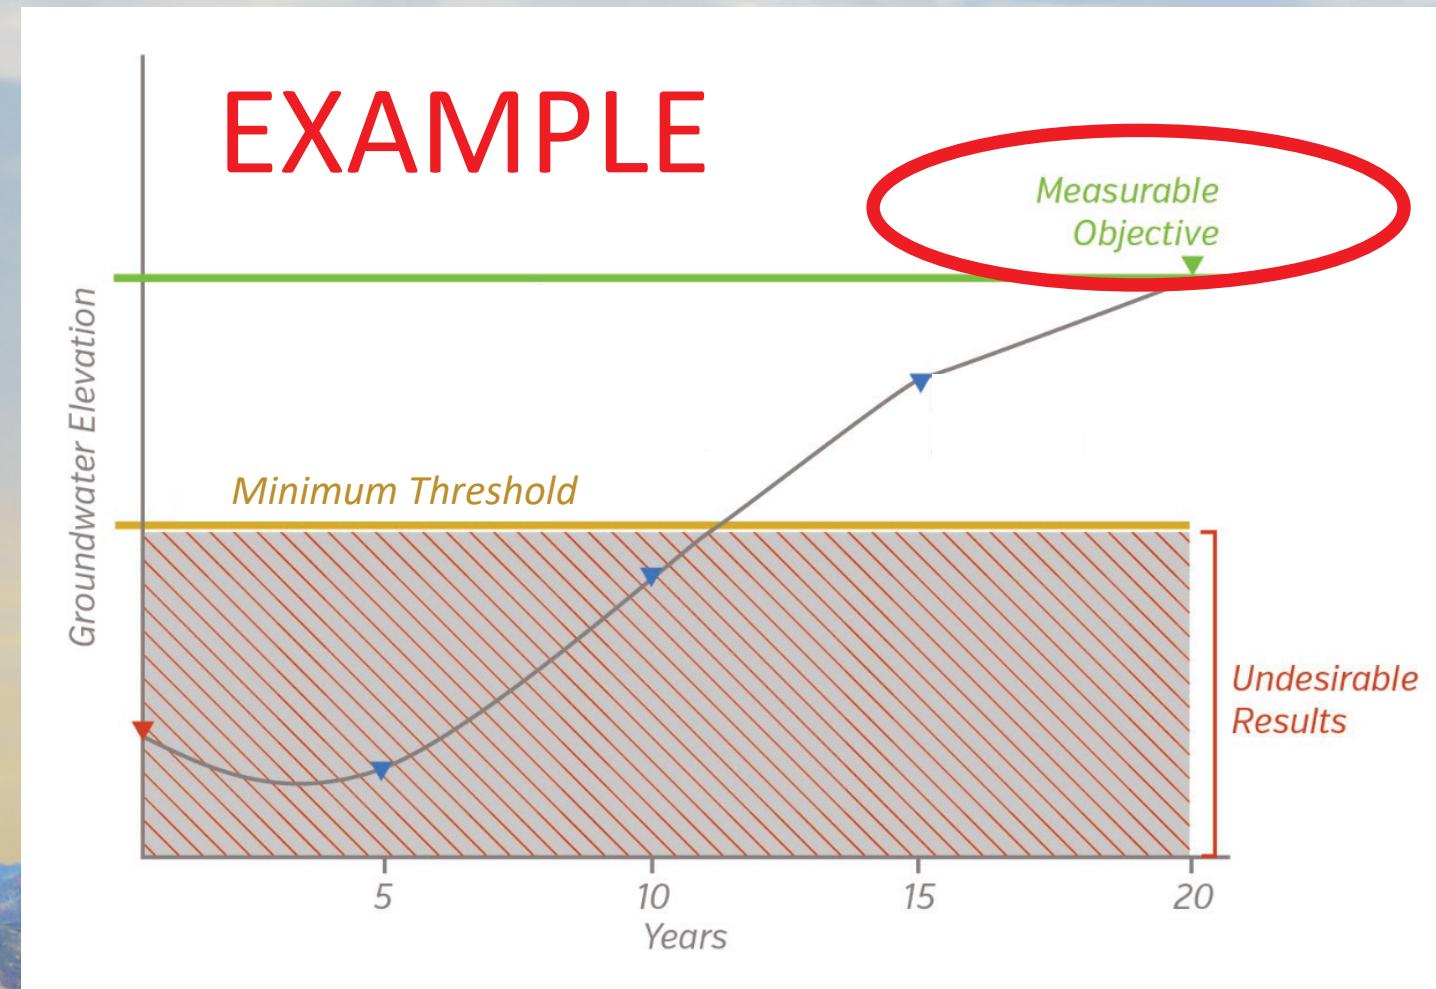

Undesirable Results, Minimum Thresholds & Measurable Objectives

- Minimum Thresholds:
 - Anything worse is considered an “undesirable result”
 - The lowest the basin can go without something significant and unreasonable happening to groundwater

Undesirable Results, Minimum Thresholds & Measurable Objectives

- Measurable Objectives:
 - A management target that provides a usable buffer for use during droughts, etc
 - Establishes the upper targeted boundary for basin management

Workshop Discussion Questions

Sustaining the future of the Cuyama Valley

- What does sustainability of the Cuyama Valley mean for you?
- Is your picture of the future different from the Cuyama Valley you know today, if it is, how is it different?

The role of water in the future of the Cuyama Valley

- What do you see as important challenges or undesirable effects for the future of water in the Valley for the following?
 - Water and Jobs
 - Water and Community/Households
 - Water and Small Farms
 - Water and Large Farms
 - Water and Natural Resources

Cuyama Basin Groundwater Sustainability Plan – Discussion Topics
